Preface

We announce a 20% discount on our entire price-list effective January 15, 1931. The following items are not available due to our failure to receive an expected shipment:

- Ixia in variety
- Dahlis " "
- Lilium " " (except L. regale & L. speciosum)
- Botanical Tulips
- Miscellaneous bulbs

GUNThER GARDENS

To the Garden Lovers

Who come to Gunther Gardens

We extend to you our warmest welcome to share the pleasure and convenience of our new Tea House—another lovely GUNThER creation. It is located just opposite our aquatic gardens.

The privileges and use of this charming place are at the disposal of garden clubs, sororities, etc.

The Tea House.
The Octagon Garden

The garden pictured above and designed by Edmund E. Gunther, received the $1,000 prize offered by the Detroit News at the North American Flower Show in Detroit in 1928. This garden is now permanently established at the Gunther Gardens near Ann Arbor and can be enjoyed by many garden lovers.

It is an octagon garden enclosed by a high arbor-vitae hedge and dominated by the fountain in the center. It is graced by the beautiful statue sculptured by Miss Vernoff of New York City. Not only is the sunken arrangement of the flower beds very unique but the plant material that gives it its color effect is just as startling. Whenever you visit the Gunther Gardens you will have an opportunity to view this beautiful garden.
ADONIS amurensis. A most beautiful plant with broad yellow flowers appearing in early spring. Excellent for the rock garden.

*vernalis (Spring Adonis). Large yellow flowers. A most attractive plant for the early spring. Fine foliage throughout the summer.

AETHEOPAPPUS pulcherrimus (Centauraea). Bushy perennial 1½ to 2½ feet high bearing a profusion of flowers, resembling pink cornflowers, during July.

ALLIUM flavum. Excellent for planting between ground covering plants, since the plant dies down after flowering. Flowers beautiful yellow.

ASTER ptarmacoides major. One of the finest white asters for cut flowers. September and October. Desirable for the rock garden. No garden should be without this Aster.

*yunnanensis. A new variety from China which without question is one of the most beautiful asters. Excellent for cutting. July. 1 to 2 feet. Lilac-blue with yellow center.

CHRYSANTHEMUM cinerariaefolium. 1 to 1½ feet. Very attractive foliage and pretty white flowers late in the season.

*CIMICIFUGA racemosa simplex (Bugbane). Tall growing plant, 4 to 5 feet, with long open spikes of white flowers in June and July. Very effective in the border and larger rock gardens.

DELPHINIUM Menziesi. 6 to 18 inches with flowers having blue sepals and yellow petals. Excellent variety from the Canadian Rockies.

zalil. A beautiful delphinium with large yellow flowers and exquisite foliage. Excellent for cutting.

DIANTHUS carthusianorum. Hardy plant growing 12 to 20 inches high with red flowers in dense heads.

*DORONICUM Clusi (Leopard’s Bane). 1 to 2 feet with soft green foliage and numerous yellow flowers from April to June. Excellent for the rock garden.

magnificum. 1½ to 2 feet with large yellow flowers. Good for cutting.

plantagineum. 2 feet high with yellow flowers in heads. An excellent plant for woodland planting.
NOVELTIES—Continued.

*EREMURUS (Foxtail Lily; Giant Asphodel). A most interesting and unusual plant producing giant flower stalks 6 to 8 feet high, crowned with a flowering spike composed of closely set bell-shaped flowerlets.

elwesianus. A very vigorous grower with enormous spikes of pink flowers in May.

himalaicus. One of the hardiest of all with graceful spikes 6 to 8 feet high composed of numerous white flowers. The most widely planted for bold effects.

robustus. An exceptionally fine Eremurus producing spikes of rosy pink flowers on stalks 8 to 10 feet high when fully established.

Thunbergii. A desirable hybrid variety with effective spikes of pale yellow flowers in May.

ERIGERON multiradiatus. Excellent cut flower. Pink. The Erigerons should be used much more extensively.

*GALTONIA candicans (Giant Summer Hyacinth). Large handsome bulbous plant with fragrant pure white flowers 1 to 1½ inches long. Most effective for naturalizing and in the rock garden. 2 to 3 feet tall.

GEUM bulgaricum. Orange-yellow flowers from April to September. Excellent for the rock garden.

macrophyllum. Golden yellow flowers.

miniatum. Bright red flowers from April to August. 2 to 3 feet.

rivale. Purplish orange flowers.

Hudsonia (Beach Heather). A small heather-like plant suitable for dry places with small yellow flowers.

montana. A small bushy plant with bright yellow flowers. A handsome plant.

tomentosa. 4 to 8 inches high and blooming in May to July.

HUTCHINSONIA alpina. A desirable plant for the rock garden and sometimes used as a border plant. Snow-white flowers in clusters. 1 to 4 inches.

ISATIS glauca. Good border plant with yellow flowers appearing well with the glabrous foliage and good for cutting. 2 to 3 feet.

IRIS lacustris. One of the most beautiful of the dwarf Irises, is excellent for massing, at edges of woods, along streams. Flowers 2 inches high. Looks like a lawn when through blooming.
NOVELTIES—Continued.

JASIONE perennis (Shepherd’s Scabiosa). Desirable plant growing 1 to 1½ feet high with bright blue flowers during July and August.

LIATRIS cylindracea (Blazing Star; Gay Feather; Button Snakeroot). Plant grows 1 foot high with grasslike leaves and spikes of bright purple flowers.

scariosa. Plant growing 1 to 5 feet high with foliage often tinged with purple; long spikes of purple flowers in Summer.

HELENIUM hoopesi. Orange daisy 1½ feet high, very distinct from other Heleniums; an exceptionally fine plant for cutting. Should have a place in each garden.

OENOTHERA glabra (Evening Primrose). 2 feet, with bright yellow flowers contrasting effectively with the reddish brown foliage.

speciosa. A desirable perennial 1½ to 2 feet high with large white flowers delightfully fragrant.

PENTSTEMON albidus (Beard-Tongue). A very fine plant for naturalizing. Lovely foliage which colors in the Fall into beautiful shades of pink. Flowers white or with purply tinges. 2 to 3 feet.

PETASITES japonicus giganteus. 5 to 6 feet. A very desirable plant for bold and striking effects. Very fine along streams.

POTENTILLA alpestris (Cinquefoil; Five-Finger). Yellow flowers from June to September.

hybrida. Beautiful double Potentilla, in various colors, yellow, orange and red. Should be in every garden. Foliage like a strawerry.

nepalensis. Clear purple flowers appearing in July and August.

pyrenaica. Golden yellow; July and August.

PRIMULA coerulea (Primrose). Flowers purplish blue with a greenish white throat.

PULMONARIA angustifolia (Lungwort). Plant grows 6 to 12 inches high with blue flowers in April and May.
NOVELTIES—Continued.

*RODGERSIA sambucifolia. 2 to 3 feet high with bright green leaves and small white flowers. Effective for the rock garden.

SAGINA Linnaei (Pearlwort). Depressed and spready habit, each plant looks like a cushion of moss. It is this mossy effect that makes it so valuable for the rock garden. Flowers white. 3 inches.

SEDUM Kirilowi. Beautiful plant about 1 foot tall with exceptionally fine dark green foliage and bright greenish yellow flowers in large clustered heads practically all summer. Desirable for the rock garden.

STENANTHIUM robustum. North American Lily with showy white fleecy flowers, 4 to 5 feet high. Excellent as a cut flower; fine for parks.

VERONICA (Speedwell) prostrata. A prostrate growing variety of Speedwell with deep blue flowers. Very desirable for the rock garden.

teucrium rupestris. Most graceful plants possessing great merit because of their beauty and flowering.

rupestris alba. White flowers in May; 4 inches. Good for rock garden.

rupestris rosea. Same as alba with pink flowers.

VERONICA—Continued.

rupestris Heavenly Blue. Desirable because of its earlier blooming. A fine variety for border and rock garden; 4 inches.

Trehani. Blue flowers which contrast pleasingly with the yellow foliage.

Rare Plants from Greenland

These plants are very rare. They are all available for immediate shipment. Prices quoted on request only.

RANUNCULUS melandrium trifolium. Grows about 8 inches high. Pinkish flowers. Will be widely planted.

PRIMULA farinosa var. This rare plant is a native of Arctic and sub-Arctic regions. Pinkish white blooms. One umbel on a stock ten inches long. Prefers rock-lime soil.

CERASTIUM alpinum. This variety will quickly win a place in American border plantings. Flowers are white; leaves woolly. Interesting.

ARNICA alpina. Rock, border and wild-flower garden variety. The yellow blossoms are most attractive; grows about one foot high.

ERIGERON unalaschensis. Small plant for the border. Grows about 8 inches high. Use for foliage effect only.
This is what the "Detroit News" says about Mr. Gunther's wild garden at the National Flower Show, 1927:

"Michigan's wealth of native plant life is a closed book to most residents of the state. It remained for a Swiss who lives in Ann Arbor to open this book and cut the pages. The Swiss gardener is Edmund E. Gunther, whose wild flower garden is one of the beauties of the National Flower Show at Convention Hall.

"Using over 500 varieties of wild flowers, plants and shrubs, of which 300 are native to Michigan, Mr. Gunther's design is woven around a brooklet, such as thread the woody spots of Michigan. Crowding the banks, hiding in rocky corners, sweeping on into a miniature meadow, there is a carpet of shy, diffident flowers of the sort that make the May woods an idyl.

"Mr. Gunther's display is a marvelous example of what may be done in the way of a wild flower garden. Among the flowers he uses are Trilliums of several varieties, Lady Slippers in four varieties and the beautiful Wintergreen. The Jack-in-the-Pulpit adds its charm to the picture, as does the Indian Leatherwood and the blue Mertensia, those lovely Bluebells. Mr. Gunther pointed out patches of Bird's Foot Violet, Marsh Marigold, Forget-Me-Not, Dwarf Iris and Hudsonia, the Silver Michigan Heather from the sand dunes.

"The flora of every country is different," he declared, 'there are some 3,000 different Michigan plants but not more than 600 or 700 are found in any one county, in all cases the plant life is found to harmonize beautifully as a whole. In the sand dune country, for instance, a striking flora, nearly all silver-gray in color, may be found. The plants of the oak and hickory forests also have a distinctive charm, as do the totally different plants of the regions of the beech and maple trees. Even the so-called jack pine region, long considered a barren waste, is a natural garden of many beautiful plants.' "
Hardy Native Plants

In planting a wild flower garden great care is needed in arranging the plant groups. Many native plant gardens look like an untidy wilderness because they have not been arranged along ecological lines. That is, the plants do not fit into that particular environment: they are out of their native element. Soil, light requirements, exposure and slope must all be considered when planting wild flowers.

With native hardy plant material we can create the most beautiful and lasting garden pictures. With native plants you can make a rock garden right under shade trees, for there are certain plants that belong in such situations; or we may assemble a natural flora along a stream which may spread out into a bog garden with its characteristic and interesting plant life. Some of these plants require little attention and can stand full sunlight, so that they can be assembled in the open to make a constantly flowering meadow of varied hues.

Many wild flowers can be successfully transplanted to add charm to your garden. It is not advisable to go out into the woods and pull out the plants promiscuously and plant them, for you will not have much success, as a great many of these plants require special soils. Some of them need fungoid or bacterial growth on the roots, and there are many other things to be considered. The transplanting of wild flowers requires much skill, and it is best to get them from an experienced grower.

A list of the native hardy plants available at our gardens follows:

**ACHILLEA millefolium** (Yarrow). 1 to 2 feet, open sun, flowers white.

**ACHILLEA millefolium roseum.** 1 to 2 feet, heads of red or rose-pink flowers.

**ACTAEA alba** (White Baneberry). 2 feet, moist shady soil, white flowers and white berries in racemes.

**rubra** (Red Baneberry). Similar to preceding, fruit red.

**ADIANTUM pedatum** (American Maidenhair Fern). 12 to 18 inches, gracefully branched fronds, moist shaded soil.

**AGAVE virginica** (False Aloe). Rosette of leaves 1 to 2 feet long with flowering scape 3 to 5 feet; flowers white. Dry open ground.

**ALETRIS farinosa** (Colic Root). Cluster of leaves and spike of small white flowers on stem 12 to 18 inches. Dry sandy ground.
HARDY NATIVE PLANTS—Continued.

ALLIUM cernuum (Nodding Wild Onion). Cluster of pale pink drooping flowers on stem 12 to 18 inches. Moist sandy soil.

AMSONIA salicifolia. 11½ to 2½ feet. Late May and early June. Flowers blue, white throat.

ANAPHALIS margaritacea (Pearly Everlasting). Rosette of white wooly leaves, corymbs of white membranaceous flowers on stem 12 to 18 inches. Dry open soil.

ANEMONE canadensis (White Anemone). Large terminal white flowers, stem 12 to 18 inches. Moist sunny soil. quinquefolia (Wood Anemone). Dainty plant 6 to 10 inches tall, flowers white. Partially shaded soil.

AQUILEGIA canadensis (Wild Columbine). 1 to 2 feet with large nodding red and yellow flowers. Very adaptable. formosa (Western Columbine). Similar to preceding, flowers usually lemon-yellow.

ARISAEEMA triphyllum (Jack-in-the-Pulpit). 1 to 2 feet, green and brown arums, for shaded ground.

ARNICA cordifolia. 12 to 18 inches high, large yellow daisy heads. Open ground.

ARTEMISIA frigida (Mountain Sage). Tufted silver foliage. Open ground.

ARUNCUS sylvester (Goat’s Beard). 2 to 3 feet; long spikes of small white flowers. Rich semi-shaded soil.

ASARUM canadense (Wild Ginger). Lovely ground-covering plant with kidney-shaped leaves and solitary purple flowers near the ground. Moist shaded soil.

ASCLEPIAS incarnata (Swamp Milkweed). 2 to 3 feet, large clusters of small rose-pink flowers. Open swampy ground.

*ASCLEPIAS tuberosa (Butterfly Weed). 12 to 18 inches tall with large heads of bright orange flowers. Dry sandy soil.

verticillata (Prairie Milkweed). 12 to 18 inches high, slender stems with terminal clusters of white flowers. Rich open soil.

ASTER ericoides. 1 to 4 feet; graceful sprays of white flowers. Dry open soil. laevis. 2 to 3 feet. Elegant plant with bright blue flowers. Dry shaded soil.
ASTER—Continued.

undulatus. 1½ to 2 feet. Spreading branches with many showy blue flowers. Dry shaded soil.

BAPTISIA australis (Blue False Indigo). 3 to 5 feet. Blue-green foliage and numerous racemes of bright blue flowers. Rich sunny ground.

tinctoria (False Indigo). 1½ to 3 feet. Miniature bush with yellow flowers. Dry places.

BELAMCANDA chinensis (Blackberry Lily). 1½ to 3 feet. Branching stems with many orange-yellow flowers with purple spots. Open light soil.

CAMASSIA esculenta (Wild Hyacinth). 1½ to 2 feet; elongated racemes of blue flowers. Rich open ground.

*CAMPANULA rotundifolia (Harebell; Scotch Bluebell). Clumps of narrow leaves, nodding bell-like flowers on stems 6 to 18 inches high. Sun or shade.

CHELONE glabra (Snake Head). 1 to 3 feet high with dark green leaves and quaint white or rose tinted flowers. Wet rich soil.

CHELONE—Continued.

*C. nemorosa. 1½ to 2 feet high. Flowers violet-purple. Does best in moist, half-shady position.

CHIMAPHILA umbellata (Prince’s Pine). Rosette of leathery leaves with clusters of flesh pink flowers on stem 4 to 10 inches tall. Dry acid soil, shaded.

CHrysanthemum leucanthemum (Ox-Eye Daisy). 1 to 3 feet tall, large white daisies with golden center. Open sunny ground.

CIMICIFUGA racemosa (Black Cohosh). Large fernlike leaves and graceful spikes of small white flowers 3 to 5 feet long. Rich shaded or sunny soil.

*CLINTONIA borealis (Yellow Clintonia). Rosette of pale green leaves with stem 6 inches tall bearing cluster of pale yellow flowers, berries royal blue and waxy. Damp shaded soil.

CYPRIPEDIUM (Moccasin Flower) acaule. Two large leaves with large solitary pink and purple flowers. Sandy shaded soil.

parviflorum (Common Lady’s Slipper). 10 to 18 inches tall with madder-purple narrow petals and yellow pouch. Boggy places.

*spectabile (Showy Lady's Slipper). 2 feet tall with one to three large pink and white flowers. Wooded swamps.

DESMODIUM canescens (Tick Trefoil). 3 to 4 feet tall. Branched racemes of rose-pink flowers. Open sandy soil.

canadensis. 2 to 3 feet tall. Racemes of showy pink flowers. Rich open soil.

DICENTRA canadensis (Squirrel Corn). 6 to 8 inches tall. Delicate foliage and pendant heart-shaped pinkish flowers. Rich woods soil.

cucullaria (Dutchman’s Breeches). Similar to the preceding; flowers white.

CYPRIPEDIUM (Moccasin Flower) acaule. Two large leaves with large solitary pink and purple flowers. Sandy shaded soil.

EUPHORBIA corollata (Flowering Spurge). 1½ to 3 feet. Graceful. Small leaves; small, white flowers. Open situations.

cyparissias (Cypress Spurge) Stems 6 to 18 inches. Clusters of greenish yellow flowers. Effective ground cover.

EUONYMUS obovatus (Trailing Wahoo). Semi-prostrate stems 1 to 3 feet long. Leathery rounded leaves, red triangular berries. Excellent ground-cover for rich shaded soil.

FILIPENDULA rubra (Queen of the Prairie). 2 to 5 feet high. Feathery leaves and terminal branched racemes of deep peach colored flowers. Meadows.

GAillardia aristata. 2 to 3 feet tall. Large red and yellow daisy flowers. Dry open ground.

*GAULTHERIA procumbens (Wintergreen). 4 to 6 inches high. Shiny evergreen leaves, dainty white flowers and gay red berries. Acid woods soil.
*Hardy Ferns*

**ADIANIUM pedatum** (Maidenhair Fern). One of the most graceful of the hardy ferns, attaining a height of 12 to 13 inches. Prefers a rich moist soil and shady location that is well drained.

**BOTRYCHIUM virginianum** (Moonwort). A fern growing about 1 foot in height.

**CYSTOPTERIS bulbifera** (Bladder Fern). A fern having light green fronds measuring 3 feet in length. A desirable fern for massing on damp banks and hillsides.

**ONOCLEA sensibilis** (Sensitive Fern). A fern for rich moist places in either sun or shade. Fronds usually attain a height of 1 foot or more.

**OSMUNDA Claytoniana**. A fern growing 2 to 3 feet high preferring rather dry shaded places. A good fern for flower boxes.

**cinnamomea** (Cinnamon Fern). A large growing fern with fronds measuring as long as 5 feet. Thrives in wet soil in the open or in moist shady places.

**POLYPODIUM vulgare** (Common Polypody). One of the best evergreen ferns for the rock garden. Grows 4 to 10 inches high and forms a dense mat of foliage.

**PTERIS aquilina** (Common Brake). Grows in light sandy soils and open woodlands. Will thrive in either sun or shade.

**WOODSIA obtusa**. Obtuse leaved woodsia. A fine fern for the rockery, 6 to 12 inches in height.
Gaultheria procumbens. (See page 11).

HARDY NATIVE PLANTS—Continued.

GEUM montanum (Mountain Avens). A splendid ground-covering plant with dark green foliage; half shade, moist location; yellow flowers.

GILIA aggregata. 18 inches tall, showy scarlet tubular flowers. Open soil.

HELENiUM Hoopesi (Orange Daisy). 1 to 3 feet. Large heads. Open ground.

autunmale (Sneezewort). 1½ to 5 feet. Many yellow daisy-like heads. Moist open ground.

HELlANTHUS—Continued.

HEPATICA acutiloba (Sharp-lobed Hepatica). Two tri-lobate leaves with dainty pink, violet or white flowers in early spring. Shaded soil.

triloba (Round-lobed Hepatica). Similar with blut leaves.

HEUCHERA americana (Common Alum Root). 1½ to 2½ feet; flowering stem with clusters of greenish yellow flowers. Pretty heart shaped downy leaves in a rosette. Shaded rocks.

HIBISCUS militaris (Rose Mallow). 3 to 5 feet tall. Heart-shaped leaves and large flesh colored flowers with purple centers. Moist open soil.

HYDRASTIS canadensis (Golden Seal). 18-inch stem with a pair of bright green leaves and solitary greenish white flower. Fruit red. Rich shaded soil.

HYPERICUM perforatum. Yellow flowers, fine for mass effect at woods.

IRIS lacustris (Lake Dwarf Iris). The flowers are usually solitary and of a light violet color. Flowers large, 4 to 5 inches high, excellent for carpeting stretches along streams.
IRIS—Continued.

*JEFFERSONIA diphylla. Twin leaf bluish gray, flowers white. 1½ feet high; good for rock garden.

LILIUM. (See Native Bulbous Plants).

*LYSIMACHIA nummularia (Moneywort). Beautiful trailing perennial. Large yellow flowers excellent ground cover. Shady rock garden.

LOBELIA cardinalis. Very showy wild flower, with long stems of bright red. Excellent plant for massing along streams or ponds.

*MERTENSIA virginica (Virginia Cowslip). Light green glaucous foliage with long panicles of sky blue or pinkish color. 1 to 2 feet high. Excellent plant for the shady open woods. Good for massing.

MITCHELLA repens (Partridge Berry). Little evergreen trailing vine with rounded, white veined leaves; flowers are white with beautiful red berries in the fall.

MIMULUS moschata (Musk Flower). A low growing perennial, musk scented, with yellow flowers, excellent plant to carpet Rhododendron or Azalea beds. Flowers June to September.

*MITELLA diphylla (Bishop’s Cap). Short-stemmed heart-shaped leaves producing in early spring, white flowers 6 to 8 inches high. Shady rock garden.

MELANTHIUM. (See Native Bulbs).

MINTHA piperita (Mint). Fragrant foliage. White flowers, lovely along streams.

MYOSOTIS. (See Perennial list).

NEPETA cataria (Catnip). Aromatic herbs. Cats like it. Sunny place.

PACHYSANDRA terminalis (Japanese Spurge). Evergreen ground cover for shady or partial shade. Prefers acid soil. Nice foliage.

*PETALOSTEMUM villosum (Prairie Clover). Interesting perennial with odd pinnate leaves, with long cylindrical spikes of purple and violet color. Excellent cut flower and fine for the flowering meadow, or on sunny sandy places in the rock garden.

PHLOX divaricata (Blue Phlox). Grows in open woods. Flowers pale lilac or blue. June. Excellent for the shady rock garden or along streams.

*MERTENSIA virginica repens. (Partridge Berry). Little evergreen trailing vine with rounded, white veined leaves; flowers are white with beautiful red berries in the fall.
PHLOX—Continued.

stolonifera. Creeping variety with thickish leaves. Lovely reddish purple flowers; excellent for massing along streams or shady Rock Garden.

subulata (Moss Pink). Creeping variety, in lilac and pink colors. Dry sunny slopes.

*PODOCORUM (May Apple; Mandrake). Perennial with large round leaves and nodding white flowers; leaves look like an umbrella; red or yellow fruits. May. 1 1/2 feet tall. Excellent for shady rock garden or in front of shrubs. In large parks they will form regular islands.

*POLYGONATUM biflorum (Solomon’s Seal). Small, greenish bell-shaped flowers; lovely black berries in the fall. 1 foot high. Shady rock garden or wood border.

giganteum. Giant Solomon Seal with lovely white flower spikes in May and June. Excellent cut flower. Rock garden, partial shade.

POTENTILLA tridentata (Winter Leaf Cinquefoil). An excellent plant for a sunny gravelly place. Dark green foliage; white flowers. June and July.

PYROLA elliptica (Shinleaf). Low evergreen plant with beautiful fragrant racemes of flowers 5 to 10 inches long. May. Shady dry woods.

RUDBECKIA hirta (Black-Eyed Susan). A yellow daisy that does well on dry sunny places. 1 to 3 feet tall. Flowers from June to July. Excellent for massing. Good for flowering meadow.

*POLYCHOTOMUS laciniatum (Compass Plant). Tall perennial herb with large yellow flowered heads. Fine for massing in parks. 4 to 6 feet. July and August.

*SANGUINARIA canadensis (Bloodroot). Dwarf growing perennial, interesting leaves and delicate white flowers. April and May. Shady rock garden.
HARDY NATIVE PLANTS—Continued.

SHORTIA galacifolia. Nice creeping herbaceous perennial; large, white flowers. May and June. An excellent plant to use as a ground cover with rhododendrons.

SMILACINA racemosa (False Solomon’s Seal). Effective plant with a light green foliage and feathery terminal flower clusters. Lovely clusters of red berries in the Fall. Excellent cut flower. Shady rock garden. Fine for massing in parks, at edges of woods.

SOLIDAGO odora (Golden Rod). Fragrant Golden Rod. The crushed leaves of this perennial have a pleasant odor. Nice to naturalize at edges of woods; flowers yellow. 2 to 3 feet. July to September.

TIARELLA cordifolia (False Miterwort). Lovely plant with heart-shaped leaves. Pretty white flowers. 10 inches. May to June. Recommended for the shady rock garden.

TRADESCANTIA bracteata. (See perennial list). Dwarf, violet Spiderwort with large flowers. Excellent for the shady rock garden.

THALICTRUM. See perennial list.

TRILLIUM—Continued.

cernuum (Nodding Trillium). Flowers white or pink.

erectum. Broadly rhombic leaves with purple flowers.

stylorum. Looks like a dwarf grandiflorum with pink flowers. Excellent for massing. Shady rock garden; parks.

VIOLA. Early Spring flowering plants which should not be missing in any wild flower garden.

*blanda (White Violet). Slightly scented; good foliage; moist location, partial shade.

pubescens (Downy Yellow Violet). Long stemmed variety with yellow flowers. Dry, rich woods.

*XEROPHYLLUM (Turkey’s Beard). Lovely native Lily with needle-shaped leaves, long, raceme spike flowers. Yellow-white color. Very fragrant. May to July. 2 to 3 feet. Dry, half-shady place.
THE Bulletin of Garden Club of America, April, 1927, printed the following article on the garden illustrated in part below.

"The wild garden is a perfect reproduction of a woodland path. The damp fragrance of this young paradise transports one to the woods of May. Our Michigan woods are really lovely and these plants are all natives. The fluffy green of the Baby Larch trees is banked against the cloudy white of Juneberries, Pin Cherries and High Bush Huckleberries. These last have beautiful bell-shaped flowers. The soft Spring foliage offers a haunting harmony in greens. The dark branches of Jack Pines are vastly becoming to the yellow bloom of the Indian Leather Bush. This Leather Bush is rather an interesting shrub. It played an important part in the life of the Indians. Of its twigs they wove their baskets. The tough fiber of the bark was used to lace together their birch-bark canoes and to make thongs for their moccasins. Through a thicket of Chokeberry, Wild Gooseberry and Spice Bushes, a little path leads to a pool. This little pool is bordered with moss and ferns and Lady Slippers in pink and yellow and white. At the base of a large Chokeberry Bush is a lovely clump of Mianthemum, Wild Lily-of-the-Valley, a tiny replica of its famous cousin. Through the Ground Pine and Wintergreen grow Wild Columbine, Jack-in-the-Pulpit, and the sweet little Iris Lacustris—Heavenly Blue. Hepaticas and Galanthus drift away through the woods. Galanthus is the only plant not native in Michigan. A stunning sight is the young Skunk Cabbage in its gleaming green and brown jacket. The silver-gray fungus growing on the bark of Sassafras and Black Birch is a realistic touch."
THE following article appeared in the Bulletin of Garden Club of America, April, 1927, on the garden illustrated in part below.

"The first prize for a flower garden was given to Mr. Edmund Gunther of Ann Arbor, Michigan. This garden covered a space of forty by fifty-six feet and was divided into two parts—a wild garden and a formal garden.

"The formal garden, thirty-seven by thirty-seven, is octagonal in shape and planted on two levels. It is enclosed by an Arbor-Vitae hedge. This hedge grows higher and higher until it reaches to the top of the garden where a group of Cedars guard the entrance to the woods. Just inside the hedge is a raised border, three feet wide, planted with perennials and bulbs and supported by a dry wall which is covered with moss and rock plants. This garden, though formal in shape, is engagingly naturalistic in planting. The grading is so skillfully done that the garden seems to rise gradually to the back wall of tall Red Cedars. These trees outline a cool little plot of grass where garden seats may be placed. From the entrance of the garden one looks across a wide, flat bed of glossy green Ivy, broken by clumps of Grape Hyacinths, through beds of yellow Primroses and pale-tinted Stocks to the blaze of Tulips beyond. These riotous color tones subside into the somewhat austere beauty of White Lilies against the dark green wall of Evergreen. The unique shapes of the flower beds, and the pleasing angles of the octagon enhance the charm of this small garden, but these very things defy description. From the little green terrace at the top of the garden, one may gaze down on the gay stretch of flowers below or turn and walk into the woods beyond."
Hardy Rock and Garden Plants

There is nothing more fascinating than a well arranged rock garden, although a great many people have had sad experiences and disappointments and have not been successful in growing rock plants. For this reason we offer a few suggestions.

The most important thing about a rock garden is the soil. Many people have plenty of good black soil and they think this is just the thing for a rock garden, nothing is more injurious for the majority of alpine plants. As a rule alpines occur on sandy soil and sand must never be lacking in the soil of a rock garden. Rotted sod mixed with some sand is about as good as any soil you can use in making a rock garden. Never use manure.

From the standpoint of soil requirements the alpine plants may be divided into the following groups: (1) those that desire humus, or a slightly acid soil; (2) those that need a sandy loam; (3) those that grow on the rocks and are found on talus slopes or in crevices. If your soil has the proper physical properties your plants will grow well. Most of the alpine plants prefer a limy soil.

The next important factor is the position of the rock garden. The mistake of placing a rock garden under trees is often made, the shade and constant dripping from the trees is very injurious to many of the rock plants. It is important to give the plants air and light and to have both east and west slopes available. There are a good many species such as those of Artemisia, Achillea, Cerastium, Dianthus and Armeria, which can stand full exposure to the sun.

Proper watering is one of the most essential things. Generally in spring when the alpines make their full growth, as during April and May, they need plenty of water. Then in July and August watering should be done sparingly to prevent the plants from starting a second growth late in the season.

Do not mulch the alpine plants too much. Cold does not injure these plants but the constant freezing and thawing during the winter is harmful. To postpone the spring awakening of these plants as long as possible, the rock garden should be protected by heaping on snow.

See that the rockery has plenty of drainage. It is a good plan to build the garden in the fall and plant it next spring after it is well settled.

Rock plants are marked with an asterisk in the general list. All so marked are good at least under most of the conditions noted above.
ACAENA (New Zealand Bur). Trailing plant used for rock gardening and ground covering.

ACHILLEA (Milfoil; Yarrow). Herbaceous, hardy perennials for borders and rock gardens; easy to cultivate.

Claevenne. Dwarf tufted, hoary alpine plant, particularly good for rock gardens.

Kellereri. Fernlike grayish green foliage; flowers pure white.

millefolium roseum. A tall growing perennial 1 to 2 feet high with corymb of rose-pink to purple flowers in summer. Suitable for wild gardens and hardy borders.

sibirica. Tall plant growing 1 to 2 feet with long silvery leaves. Best adapted as a foliage plant along walls for entire summer effect.

*ACONITUM (Monkshood; Wolfsbane). Hardy herbaceous plants very ornamental, specially adapted for massing or planting in borders for their showy flowers and effective foliage. Well adapted for the shrubbery border. Shade loving.

anthora. Flowers pale yellow during June and July; 1 to 2 feet.

ACONITUM—Continued.

japonicum. 3 to 4 feet; shiny dark green foliage; large deep blue flowers tinged with red; July to September.

lycoctonum. 3 to 6 feet; flowers whitish to yellow appearing June to September.

Napellus. 3 to 4 feet; flowers blue appearing in June and July.

Wilsoni. 6 to 7 feet; mauve colored spikes of flowers. Late autumn.

ADENOPHORA. Plants with blue nodding flowers abundantly produced in midsummer in loose racemes. Best adapted as a border plant.

communis. Light blue flowers in loose pyramidal panicles.

AJUGA genevensis. Loves a dry sunny place in the alpine garden. Flowers blue.

Potanini. Shrubby perennial with flowering spikes 2 to 3 feet high; flowers measuring 1 to 2 inches across; light blue and appear during July and August.

*AETHIONEMA cordifolium. Lilac rose; flowers May to July. Valuable for rock gardening.

grandiflorum. Rose-purple; rich flowering. May to July. A good rock plant.
**ALLIUM—Continued.**

*ascalonicum.* Grows 1 foot high bearing lilac-colored flowers.

*coeruleum.* 1½ feet tall, round heads of heavenly blue flowers; June, July.

carinatum. Lovely white color.

cernuum. 1 foot high with nodding umbels of rose colored or white flowers; May and June.

cyanem. 1 foot high with nodding umbels of blue flowers.

karatwienense. Plant growing up to 1 foot high with very wide leaves and large umbels of white flowers tinged with red.

narcissiflorum. Plant with nodding umbels of light to dark purple flowers appearing in August.

---

*AGROSTEMMA* (Rose Campion; Rose of Heaven; Mullein Pink). Hardy flowering plants for the border also appearing well in groups.

coronaria (Mullein Pink). 1 to 3 feet tall with flowers from rose to crimson in color and 1 to 2 inches wide; white hairy foliage. July and August.

flos-jovis. Flowers in dense umbel-like clusters; rosy red; 12 to 18 inches high with white woolly leaves. June to July. Desirable for sunny locations.

hybrida-Walkeri. Beautiful pink color.

*ALLIUM* (Wild Onion). Hardy bulbous plants flowering in the Spring and early Summer; effective for the rock garden. They should be planted between ground covering plants.

acuminatum. Grows 4 to 10 inches high with a many flowered umbel of pink color.
ALSINE pinifolia. Lovely rock plant with star-shaped, white flowers; 3 to 4 inches. June.

ALSTROEMERIA. Showy tall growing plants with red, purple or yellow flowers. Treated as bulbs.

aurantiaca. Plant growing 2 to 4 feet high with umbels of bright yellow flowers. Should be planted in partial shade and given abundance of moisture. June to August.

ALTHEA (Hollyhock). Old-fashioned perennial. Comes in all shades of colors. We have a very fine collection; white, red, yellow, rose, maroon and pink colors.

ALYSSUM (Rock Madwort). Low growing plants with many clustered flowers. Admirably well adapted for low borders and rock gardens.

argentum. Dwarf, dense growing, perennial with about 15-inch spread; flowers yellow and appearing in clusters all Summer. Fine for massing on slopes and in rock gardens.

Moellendorfianum. Very compact growing plant most suitable for the rock garden; flowers bright yellow in long racemes.

ALYSSUM—Continued.

montanum. Tufted Alpine 2 to 3 inches high with fragrant yellow flowers. Fine for the rockery.

rostratum. Plant with about 20 inch spread with deep yellow flowers in dense heads. A fine rock plant. Flowers very early.

saxatile citrinum. Flowers of a sulphur-yellow; dwarf and compact.

saxatile compactum. Dwarf plant with bright yellow flowers. An excellent plant for edging and the rockery.

serpyllifolium. Dwarf plant 2 to 4 inches high with rough hoary leaves and pale yellow flowers in racemes. Desirable for the rock garden.

Wulfenianum. Produces fine large flowers of a pale yellow color. Requiring A. montanum except that the leaves are not as silver.

AMSONIA. Tough barked perennial with blue or bluish flowers appearing in May and June. Useful for border planting.
ANEMONE (Windflower). Hardy and most attractive garden plant, growing best in well drained rich sandy loam.

coronaria (Poppy-Flowered Anemone). Plant growing 1 to 1½ feet high with flowers 1½ to 2½ inches across and appearing in many colors from early spring to June.

Halleri. 6 inches. Whitish purple flowers.

hupehensis. Flowers are mauve-rose and appear about one month earlier than A. japonica.

*nemorosa. Early spring blooming plants for partial shade. April and May. Flower white or purple; 3 to 8 inches high.

*pennsylvania. Plant with pure white flowers; excellent for mass effect. 1 to 2 feet high and blooms all summer.

*pulsatilla. Plants growing 8 to 12 inches high with reddish purple flowers; good for rock gardens. April.

*ranunculoides. Grows 3 to 4 inches high with solitary golden yellow flowers appearing in March and April. Good for massing.

*vernalis. Dwarf growing plant, 4 to 6 inches high with purple and white flowers. April. Prefers a cool moist situation. Good for rock gardens.

japonica Richard Ahrends. Large flowers, shell pink-lilac hue.

oregana. Grows 3 to 12 inches high with blue or purplish flowers.

*ANAPHALIS (Everlasting). White woolly perennial plants good for edging borders and for rock gardening; does well in poor soil.

margaritacea. Plants growing 1 to 2 feet high with pearly white heads making it an ideal border plant for contrast effects.

ANEMONE—Continued.

tabernaemontana (Willow Amsonia). Blue starlike flowers. Holds its foliage quite late.

ANCHUSA (Alkanet; Bugloss). A very desirable perennial for mass effect in the hardy border with blue or purple flowers in panicles, heads or racemes. Effective in the rock garden.

Barrelieri. A perennial 2 to 2½ feet high with blue flowers having white tubes and a pink or yellow throat. Early summer.

capensis. Biennial 1 to 2 feet high with red margined blue flowers having a white throat. Often winter-killed.

italica (Dropmore). Perennial growing 3 feet high with blue flowers in loose heads. Best suited to partial shade. June to September.

italica grandiflora (Picotee). Blue and white.

sempervirens. Beautiful blue. Foliage stays green almost all winter.
ANTHEMIS (Chamomile; Hardy Marguerite). Heavy scented plants that are excellent for border planting, blooming from midsummer until frost.

Kelwayi. Flowers are deep golden yellow with finely divided foliage.

Kelwayi alba. White flowers.

Kelwayi pallida. Flowers sulphur-yellow.

nobilis. Half spreading and much branching plant with finely dissected foliage and flowers white with a yellow center.

ANTHERICUM (Paradisea). Useful for lawn vases and borders that are protected in the winter.

liliago (St. Bernard's Lily). Stems 2 to 3 feet high bearing a raceme of open spreading flowers up to 1 inch wide.

ANTHYLLIS (Kidney Vetch). Plants prized for their spikes of yellow, purple or white flowers and usually silky pinnate foliage.

montana. Plant growing 10 to 12 inches high with silky, hoary foliage and dense heads of purple flowers. Desirable for rock gardens.

*AQUILEGIA (Columbine). Hardy perennial herbs with showy flowers desirable for border planting and gardens. The commoner varieties are admirably adapted to rock gardens.

canadensis (Common Columbine). 1 to 2 feet high with yellow flowers having red coloring, appearing May to July.

chrysantha. 3 to 4 feet high with abundant flowering habit bearing flowers 2 to 3 inches wide, yellow tinted with claret. May to August.

coerula (Colorado Columbine). Plant 1 to 1½ feet high with flowers 2 inches across, white tinted with blue. April to July.

coerula cuprea. Copper-red, long dark spurs and great open yellow corolla.

flabellata. 1 to 1½ feet high with bright lilac flowers merging to pale purple. Summer.

formosa. Resembles A. canadensis, excepting the flowers which are brick-red and yellow or entirely yellow.

glandulosa. 1 to 1½ feet high with large flowers of a bright lilac-blue bordered with creamy white. May and June.

haylodgensis. Plant growing up to 3 feet high. A rare plant; flowers in July; flower resembles A. chrysantha color.

longissima. A tall growing plant with pale yellow flowers having a longer spur than A. chrysantha.

nivea grandiflora. 2 to 3 feet high with blue and white flowers. One of the most attractive of the Columbines. June.

oxysepala. Plant grows 2½ feet high with blue and white flowers. One of the most attractive of the Columbines. June.

sibirica. Plant grows 1½ to 2 feet high with many flowers of a pale or bright lilac-blue appearing in the summer.

Skinneri. Plant grows 1 to 2 feet high; flowers have green sepals, greenish orange petals and bright red spurs. Requires a light soil and sunny exposure. July to September.

transylvanica. Plant growing 1½ feet high with coppery bronze flowers.

vulgaris. Plant grows 1½ to 2 feet high; many flowered, having violet colored blooms appearing in the summer.

vulgaris alba flore pleno. Flowers much doubled and pure white to deep blue.
**ARABIS** (Rock Cress). Small plants with white or purple flowers; useful for low borders or rock gardening.

* **alpina grandiflora superba.** Desirable for the rockery; white flowers.

* **alpina rosea.** Pink flowers.

**ARENARIA** (Sandwort). Plants for rock gardening and low borders forming mats or carpets of low growing deep green foliage. Easily cultivated.

* **grandiflora.** 8 to 10 inches high with white flowers of large size.

* **laricifolia.** 15 inches high with white flowers.

* **montana.** Flowers large and solitary; white; grows 6 to 8 inches high.

**ARMERIA** (Sea Pink; Thrift). Small perennial herbs forming rosettes of narrow evergreen leaves. Very good for edgings, borders and rockeries.

* **Laucheana.** Flowers light rose in color.

* **maritima.** 1 foot high with lilac colored flowers.

* **plantaginea.** White flowers involucrated with pink petals.

**ARNICA** cordifolia. Up to 2 feet high with yellow flowers; grown as an alpine.

* **montana.** Grown as an alpine or in the rock garden and sometimes as a border plant. 1 foot high; yellow flowers of good size.

**ARTEMISIA** (Wormwood). Thrives in any kind of soil; aromatic and bitter perennials for the hardy border and rock garden.

* **frigidia.** Herb 8 to 12 inches high that is good for border planting.

* **lactifolia.** Excellent plant for border; glabrous green; creamy white flowers.

* **mutellina.** 8 to 10 inches high with silvery gray foliage. Very good for the rock garden. Yellow flowers from July to September.

**ASARUM** (Wild Ginger). Splendid ground covering plant for partial shade.

* **canadense.** Thin kidney-shaped leaves; chocolate-brown flowers appearing beneath the foliage.

* **caudatum.** Heart-shaped leaves that are evergreen.

**ASPERULA** (Woodruff). Dwarf hardy herbs for borders and rock gardens in the shade; growing most luxuriantly in moist soil.

* **hexaphylla.** Plant with a spread of 2 to 3 feet with white or pink flowers.

* **odorata.** Plant growing 6 to 8 inches high with white flowers; used as a ground covering plant in shady places and for edging.

**ASTER** (Michaelmas Daisies). Excellent plants for garden effect in the late summer and fall. Some dwarf species particularly good for the rock garden.

* **alpinus.** Plant growing up to 10 inches high with large violet rayed heads. Valued as an alpine or rock garden plant.

* **alpinus alba.** White flowers.

* **alpinus Goliath.** Soft blue, large flowers, long stems.

* **alpinus Nixe.** Light blue, large flowering.

* **alpinus rubra.** Pink and lavender.

* **alpinus speciosus.** Taller and stronger growing; form heads 3 to 4 inches wide, purplish violet.

* **alpinus superbus.** Large showy form that is excellent for border planting.

* **amelans (Schoene von Ronsdorf).** Rose-lilac flowers of extra large size appearing from September through October.

* **bessarabicus.** Tall growing with deep purple flowers. Most showy and desirable.
ASTER—Continued.

**Fremonti.** Up to 2 feet high with lilac-rose flowers. May.

**horizontalis hybridus grandiflora.** Mixed colors.

**hybridus Schneeflocke.** Pure white, large flowers, excellent for cutting.

**Porteri.** A splendid hardy aster for the rock or wall garden.

**ptarmicoides.** Plant growing up to 2 feet high with thick white heads. July to September. See Novelties.

**puniceus pulcherrimus.** To 4 feet high with lilac-colored flowers of unusual size in pyramidal heads. September and October.

**pyramidalis hybridus.** Pink tinged with blue.

**subcoeruleus.** Erect growing herb with large solitary flowers borne on long stalks; pale blue with yellow disc, appearing in June.

**ASTILBE (False Goat’s Beard).** Ornamental perennial herbs grown chiefly for their showy panicles of flowers. Foliage is handsome, compound and of a bright green color. Easily grown in any well made border, preferring rich soil and plenty of water. Give a very conspicuous effect throughout the summer with their beautiful bloom. We have one of the finest collections of Astilbes.

**Aster alpinus.**

**ASTILBE, Arendsi hybrids.**

**Amethyst.** Well branched spikes of deep violet-purple. End of June.

**Bergkristall.** Tall slender sprays of white flowers. August.

**Davidi.** 4 to 6 feet high; bright rose-pink. July and August.

**Diamant.** Beautiful white color; tall; excellent for cutting.

**Frieda Klapp.** 3 feet with long spikes of dark carmine-purple; late.

**Granat.** Dark crimson flowers in strong divided spikes. One of the finest Astilbes.

**Grete Puengel.** 3 feet; vigorous grower with beautiful foliage. Beautiful pink rose flower.

**Hanna Stodt.** Resembles the foregoing in growth and vigor; light carmine-rose.

**Irene Rottsieper.** 2½ feet high; flowers are beautiful pure salmon-rose. Excellent for potting because of compact growth.

**Lachskönigin.** Beautiful lilac-rose color, excellent for cutting. July and August.

**Lydia Hagemann.** 3 to 3½ feet; long full spikes of pearl-like flowers of a soft salmon-pink. Fine for cutting.

**Rheinland.** Bright crimson flower spikes shaded with salmon.

**rosea grandis.** Beautiful rose color. Exceptionally fine.
ASTILBE—Continued.

Rubin. 1½ to 2 feet high. Deep pink.

simplicifolia alba. Beautiful spikes of white. Splendid bloomer.

simplicifolia rosea. A beautiful pink; exquisite for rock gardens.

Walküre. A late flowering variety; beautiful pyramidal spikes of a striking pink. Flowers very late, end of August.

ASTILBE japonica hybrids.

Gladstone. 2 feet high; fine white flowers in large pyramidal heads. June and July.

Gruno. 4 feet high; light and graceful spikes of salmon-pink flowers.

Moerheimi. Pink flowers of large size appearing somewhat similar in habit to A. Davidi. June and July.

Salland. 5 to 6 feet high; red flowers borne on red stems.

ASTRAGALUS (Milk Vetch). Prefers light soil and exposed position. Dwarf varieties suitable for borders and rockeries.

alopecuroides. 2 to 5 feet high with yellow flowers in thick oblong spikes.

grandiflorum. Rose-purple; rich flowering. May to July. A good rock plant.

*AUBRIETIA (Purple Rock Cress). Showy perennial for rock gardening or edging, making mats of foliage and flowers.

Bougainvillei. Dwarf and compact. Blooming in late spring and summer with light violet flowers.

deltoides. Grows up to 1 foot high with lax clusters of violet or purple flowers.

Leichtlini. Flowers are fiery carmine-rose.

Moerheimi. Pink flower of large size appearing from April to June.

violacea. One of the largest forms under deltoidea.

BAPTISIA australis (False Indigo). 4 to 6 feet high. Flowers of indigo-blue in long racemes.

*BELLIS (English Daisy). Low perennials with single heads used for borders and edging.

ASTRANTIA (Masterwort). Plants about 1 foot high; used for borders. Half shade. July to August.

alba. Beautiful white flowers.

major rosea. 1 to 3 feet high with flowers pinkish to white. May and June.

*ATHAMANTHA (Eyewort). Plants growing up to 15 inches high with white flowers.

cretensis. 3 to 15 inches high.

*AETHIONEMA cordifolium. Lilac-rose; flowers May to July. Valuable for rock gardening.
GUNTHER GARDENS

BELLIS—Continued.

perennis. 3 to 6 inches high with small double flowers.

perennis alba. Having white flowers.

perennis monstrosa types: Flore pleno, dark pink; flore pleno, light pink; flore pleno, white; Fuesilier, White Giant, flowers of these two new varieties are as large as a daisy, excellent for cutting.

BETONICA. See Stachys.

BOCCONIA japonica (Plume Poppy). Perennial 5 to 8 feet high with pinkish flowers.

BOLTONIA (False Chamomile). Showy perennial with aster-like flowers lasting all summer and fall.

asteroides. White flowers.

latisquama. Pink flowers tinged with lavender. 4 to 6 feet. Very excellent for cutting.

BORAGO laxiflora. Small alpine with purple or violet flowers.

BOYKINIA aconitifolia. Beautiful Saxifrage, interestingly lobed leaves, with a creamy white flower, moist, half-shady place, effective in massing.

BRODIAEA lactea. 1 to 2 feet high with white flowers.

BUPHTHALMUM salicifolium (Ox-Eye Daisy). Large heads with long yellow rays.

CALAMINTHA (Calamint). See Stureja.

CALTHA leptosepala (Marsh Marigold). Plant grows up to 1 foot high with solitary white flowers during May and June.
*CAMPANULA* (Bluebells; Harebell). Desirable perennials for the hardy border and rock garden.

*alaskana.* Dwarf form of *C. rotundifolia.*

*alliariaefolia.* 1 to 2 feet high with white nodding flowers.

*barbata.* 6 to 9 inches high with nodding pale blue flowers.

*calycanthema.* 1 to 4 feet high with violet-blue to white flowers.

*carpatica.* 9 to 18 inches with very large deep blue flowers.

*glomerata.* 1 to 2 feet with flowers violet-blue to white in dense heads.

*latifolia.* 3 to 4 feet with purple or dark blue flowers.

*macrantha.* 2 to 3 feet with large blue or white flowers along the stem.

*mirabilis.* 1 foot high with pale lilac flowers of large size.

*persicifolia.* 2 to 3 feet with blue and white flowers.

*pyramidalis alba.* 4 to 5 feet with white flowers in pyramidal racemes.

*Scheuchzeri.* 10 to 12 inches, usually one flower, of a dark blue color.

*turbinata.* Dwarf form with blue flowers.

*CAREX maxima* (Sedge). Grasslike perennial useful for border and for bog gardens.

*CATANANCHE coerulea.* 2 feet high with blue flowers 2 inches across appearing from June to August.

*coerulea bicolor.* As above, but heads with white margins and blue center.

*CENTAUREA dealbata* (Bachelor Button; Cornflower). Up to 2 feet high with heads of red flowers. July to September.

*glastifolia.* Strong growing perennial with yellow flowers. June to September.

*macrocephala.* 2 to 3 feet with very large yellow heads.

*montana rosea.* Up to 20 inches high with rose-colored flowers.

*pulcherrima.* 3 feet high and bushy; rose-purple flowers in July.
GUNThER GARDENS

Pyrethrum—Painted Daisy. (See page 52).

Aquilegia—Columbine. (See page 24).

Campanula—Canterbury Bells. (See page 29).
Delphiniums deserve a place in almost every perennial planting. The bold, handsome spikes are an ornament to any garden. Everyone can grow them, and grow them successfully.
GUNTHER GARDENS

CHEIRANTHUS Allionii. 1 foot or less in height with brilliant orange-colored flowers.

linifolius. Lilac colored blooms all Summer. Fine for the rockery.

CHELONE nemorosa (Shellflower). 2 feet or less with violet-purple flowers.

tomentosum. Low creeping plant with white flowers.

*CENTRANTHUS ruber coccineus. 1 to 3 feet high with numerous fragrant flowers.

CEPHALARIA alpina. 5 to 6 feet with sulphur-yellow flowers.

tatarica. 6 feet high with showy cream-white flat heads.

Hardy Chrysanthemums (Early Flowering). We have selected only those that are absolutely hardy in Michigan and flower before frost.

A. Barham. Orange-bronze.

Carrie. Deep yellow.

Champ d'Or. Canary yellow.

Cranford Pink. Exquisite shade of pink.

Cranford White. A pure white.
CHRYSANTHEMUMS—Continued.

Murillo. One of the best shades of pink.
Normandie. Creamy white. One of the earliest.
Yellow Normandie. Yellowish bronze. An early variety of great worth.

CHRYSANTHEMUM (Shasta Daisy). They form an important cut flower in the sunny perennial garden.

leucanthemum. 1 to 2 feet high with white flower heads and yellow center. June and July.
laciniatum. A variety having floriferous large white flowers. Exceptionally fine.

maximum Prinzessin Heinrich. Pure white, very large flowers.
CIMICIFUGA (Bugbane; Snakeroot). Tall, ornamental perennial suitable for bold effects or the border.
simplex. 4 to 6 feet tall. A handsome perennial with spikes of white flowers during July and August.

CLEMATIS grandiflora flore pleno. A double form of the preceding.
CORONILLA cappadocica (Crown Vetch). 1 foot high; large yellow flowers.

CLAYTONIA parviflora. Flowers white or pale rose, a splendid ground covering plant. Prefers moist shady places.

CLEMATIS crispa (Virgin's Bower). Vine 3 to 4 feet long with flowers purple to whitish. June to September.

integrifolia. 2 feet high with blue flowers. June to August.
**Corydalis solida.** Flowers large, purplish, appearing in spring; 6 inches.

**Corydalis thalictrifolia.** Yellow flowers in large spreading racemes.

**Crambe tatarica** (Tartarian Bread). Flowers small and white.

**Crucianella stylosa** (Crosswort). Early flowering perennial, bright purple bell-shaped flowers, 6 inches.

**Cynoglossum amabile** (Hound’s Tongue; Chinese Forget-Me-Not). 1 to 3 feet with blue flowers of large size. Fine for mass effect.

**Clintonia uniflora** (Blue Bead). Solitary white flowers on short stems. The blue berries are the most effective on this plant. Shady woods.

**Coreopsis grandiflora** (Tickseed). 1 to 2 feet with yellow flowers. May to June.

**Daphne Cneorum** (Garland Flower). Shrub with long trailing branches. Fragrant pink flowers in April and May. Excellent for the rock garden.

**Delphinium** (Larkspur). With this list of Delphiniums you can have a succession of flowers from early spring till fall, ranging in color from white, different shades of blue, red, pink and even yellow.

**Belladonna.** 2 feet with sky-blue flowers.

**Brunonianum** (Musk Larkspur). 1 to 1½ feet with large light blue flowers from July to September.

**Cashmerianum.** 10 to 18 inches high with deep azure-blue flowers during July to September.

**Chinense grandiflorum violaceum.** Beautiful rose color.

**Elatum.** 2 to 6 feet high with blue to dark violet flowers from July to August.

**Formosum.** 2 to 3 feet high with blue flowers; June to August.

**Formosum coelestinum.** Same as above with light blue flowers.

**Alba Moerheimi.** Beautiful white spikes.

**Gold Medal Hybrids.** In various shades.
DELPHINIUM—Continued.
nudicaule. 1 to 1 1/2 feet high with yellow to orange-red flowers from April to July.
sinense coerulum. Splendid variety with red-violet flowers.
sinense pumilum coerulum. Dwarf blue; 1 foot tall.
sulphureum. 1 to 2 feet high with large yellow flowers in June and July.

DIANTHUS (Pinks) alpinus. Deep rose or purplish flowers and sometimes spotted with crimson.
arenarius. 6 inches high with white fragrant flowers. Good for the border or rockery, prefers dry sandy place.
caesius (Cheddar Pink). Compact grower with rose colored fragrant flowers. Excellent for the rock garden.
*deltoides (Maiden Pink). 6 to 10 inches high; tufted, flowers deep red and fragrant. Good for the border and rockery.
deltoides Brilliant. Bright red, good bloomer.
egneglectus. 3 to 4 inches high with small reddish purple flowers. Excellent for the rock garden.
*plumarius (Clove Pink). Garden pinks are easily grown. They range in color from white to deep rose. They are excellent plants for edging. Their foliage is as effective as their flowers.
plumarius flore pleno. Double mixed.
cyclop. Single large flowers beautiful pink shades.

*DIANTHUS BARBATUS (Sweet William). Sweet Williams are excellent plants for cut flowers.
Pink Beauty. Salmon-rose, charming new color.
nigrescens. Dark red color.
albus. Pure white.

DICTAMNUS (Gas Plant; Burning Bush; Fraxinella). A showy border plant with fragrant foliage and showy flowers.
caucasicus. A large growing form with racemes of white flowers during June and July.

DICTAMNUS—Continued.
ambigua. Flowers yellow; a splendid variety; good for naturalizing in parks.

DIELYTRA or DICENTRA (Bleeding Heart). One of the most beautiful perennials. Its heart-shaped rose-colored flowers appear in early Spring. Prefers half shade.
formosa. Fernlike foliage; pleasing shade of pink. June to July.
*eximia. Dwarf variety; fine for edging and in the rockery. Grows in sun or shade.
spectabilis (Bleeding Heart). A desirable perennial growing 2 to 2 1/2 feet high with large rosy red flowers having the inner petals white and protruding. April and May.

*DIGITALIS (Foxglove). Stately and picturesque plants grown for their mass effects in the hardy border. Excellent for naturalizing on the border of woodland and in the forefront of large shrubbery plantings.
ambigua. 2 to 3 feet with large yellowish flowers marked with brown.
gloxiniaeflora. 3 to 4 feet; a popular variety ranging in color from rose-pink to deep purple.
lanata. Yellow and brown, very fine for the wild garden.
purpurea (Common Foxglove). 2 to 4 feet; large spikes of flowers ranging through shades of purple; more or less spotted.
DODECATHEON (American Cowslip; Shooting Star). Small growing perennials desirable for the hardy border and for their interesting flowers.

Jeffreyi. Deep purple flowers in umbels.

pauciflorum. 1½ to 2 feet and having blue flowers.

DORONICUM (Leopard's Bane). Hardy herbaceous plants growing 1 to 2 feet tall with yellow, many flowered heads appearing in spring.

austriacum. A sub-alpine plant desirable for the hardy border and rock garden.

excelsum. A robust variety growing 4 to 5 feet tall with flowers sometimes 4 inches across.

Pardalianches. A desirable plant for woodland planting.

DRACOCEPHALUM (Dragonhead). Very showy plants for the hardy border. Preferring a cool situation.

peregrinum album. White, excellent cut flower.

Ruychiana. 2 feet. Flowers purple or purplish blue in the early summer.

ECHINACEA purpurea (Purple Coneflower). 2 to 3 feet with many flowered heads of reddish purple flowers from June to September.

Echinops (Globe Thistle). Coarse thistle-like plants with blue or white flowers; desirable for the hardy border and effective in the wild garden.

humilis cyanea. 3 to 4 feet and a most striking plant for the hardy border. Good for cut flowers and winter bouquets.

ritro. A showy plant growing 2 to 3 feet high with heads of metallic blue flowers.

EDRAIANTHUS. See Wahlenbergia.

EPILOBIUM angustifolium (Willow-herb). Pink flowers; fine for naturalizing.

Hectori. A dwarf creeping plant with dark small leaves; white flowers, excellent for carpeting patches in the rockery.
*EPIMEDIUM (Bishop’s Hat). Interesting plants with unique evergreen leaves. Excellent plants for the shady, hardy rock garden.

**pinnatum.** Yellow flowers. May.
**violaceum.** Reddish violet flowers.

EREMURUS. A hardy desert plant effective for strong contrast in the hardy border and in specimen grouping alone.

ERIGERON (Fleabane). Effective genus of plants having flowers resembling the Michaelmas Daisy.

**aurantiacus hybridus.** Grows 9 to 12 inches high with orange colored flowers during July and August.

Coulteri. Low growing plant producing spreading masses of white flowers. A most effective perennial.

**speciosus grandiflorus.** Large rosy violet flowers. June and July.
**mesagrande speciosus.** 1 to \( \frac{1}{2} \) feet with violet-blue flowers, fine for cutting.
**multiradiatus roseus.** Soft pink. Splendid cut flower.

ERINUS. A hardy tufted plant for the rock garden.

**alpinus.** Attractive rosettes of foliage and racemes of rosy purple flowers. A desirable plant for the rockery or the dry wall. 4 inches.

ERYNGIUM (Sea Holly). Easy grower. Finely cut spiny foliage and thistle-like heads of steel blue flowers.

**amethystinum.** 2 to 3 feet tall. True blue thistle.

Bourgati. 1 to \( \frac{1}{2} \) feet high with blue flowers.
**giganteum.** Stout growing plant 5 to 6 feet high with large cylindrical heads of blue flowers appearing in the summer. Good for dry bouquets.

ERYNGIUM (Sea Holly). Easy grower. Finely cut spiny foliage and thistle-like heads of steel blue flowers.

**amethystinum.** 2 to 3 feet tall. True blue thistle.

Bourgati. 1 to \( \frac{1}{2} \) feet high with blue flowers.
**giganteum.** Stout growing plant 5 to 6 feet high with large cylindrical heads of blue flowers appearing in the summer. Good for dry bouquets.

ERYSIMUM (Hedge Mustard; Treacle Mustard). Plants for the front of the hardy border. Prefer full sun.

**aurantiacum.** A desirable rock garden plant producing orange-yellow flowers in the spring.

**pulchellum** (Fairy Wallflower). Grows 4 to 6 inches high with sulphur-yellow flowers. Excellent for the rock garden.

ERYTHRONIUM (Dog’s Tooth Violet; Adder’s Tongue). See Miscellaneous Bulbs.

EUPATORIUM (Thoroughwort). A most desirable perennial for the hardy border and for naturalizing in the woodland.

**ageratoides.** 2½ to 3½ feet. A most effective and desirable border plant. Minute white flowers appear in dense heads during August and September. Excellent for cutting.

**coelestrinum.** 18 to 24 inches high; light purple flowers similar to ageratum. Flowers from August till frost.

EUPHORBIA (Milkwort; Milkweed; Wolf’s Milk; Spurge). Showy plants producing effective contrast in the hardy border on account of their foliage and flowering.

**corollata.** See Native Plants.
**myrsinites.** An effective prostrate species with bluish foliage and heads of yellow flowers. Effective in the rock garden.

**polychroma.** A most beautiful plant about 1 foot high with yellow flowers during May and June.
FERULA magna (Giant Fennel). Plant with a fine foliage and yellow flowers. Effective planted along streams or as groups in parks.

FRAGARIA indica (Strawberry). Resembles our strawberry. Yellow flowers; beautiful dry red fruits. Ground covering plant; sunny place.

FUNKIA (Plantain Lily; Day Lily). Plants with broad massive foliage which makes them specially desirable for contrast effects in the hardy border. Also desirable for the rock garden.

coeerulea lanceolata. Blue flowers; July to August.

minor alba. White blooms; popular.

Sieboldiana hybrida. Metallic blue green foliage with pale blue lily-like flowers appearing in terminal racemes.

GAILLARDIA grandiflora (Blanketflower). One of the most desirable and popular of hardy perennials for the garden. Likes the open exposed location where it blooms profusely from June to November. 1 to 1½ feet.

grandiflora regalis. New; large flowers 4 to 5 inches in diameter; golden yellow and blood-red; on long stems.

sulphurea oculata. Various colors, yellow predominant.

GALEGA Hart Candi (Goat’s Rue). A showy plant of easy culture for the hardy border. Flowers in dense clusters of lilac and white. Fine for cutting. Splendid for mass effects in parks.

GENTIANA Andrewsii (Gentian). See Native Plants.

asclepiadea. Plants for the hardy border or woodland planting. Dark blue flowers from July to September; 1 to 1½ feet.

excisa. Azure-blue flowers.

lutea. Yellow flowers appearing in July and August.

pneumonanthe. Blue with greenish stripes.

*verna. Dwarf form growing 5 to 6 inches high with azure-blue flowers.

GERANIUM Endressii (Crane’s Bill). Attractive plant growing 14 to 18 inches high with delicate pink flowers with dark veining. July to September.

grandiflorum. A desirable plant for the border; deep violet flowers. 18 inches.

*ibericum. Tufted foliage and handsome violet colored flowers in showy panicles. One of the best. 18 inches.

macrorrhizum. Grows 1 foot in height with blood-red flowers appearing from May through July.

pratense. Large blue flowers borne on stems 2 to 2½ feet high. An excellent border plant.

sanguineum. Most attractive in foliage. Bright crimson flowers. 18 inches.

GEUM atrosanguineum flore pleno (Avens). Bright carmine flowers from June to September; 1 to 1½ feet.

coccineum flore pleno, Feuerball. Very decorative.

Mrs. Bradshaw. Large double flowers of a fiery red; good bloomer.

urbanum. See Native Plants.

*reptans. Dwarf alpine; golden yellow flowers. Partial shade.

*GLOBULARIA trichosantha. Grows 10 to 12 inches high, blooming in May and June. A fine edging plant or for the rockery. Excellent foliage.

GLOXINIA incarvillea (Hardy). Flowers resemble those of the prized tender Gloxinia.

GNAPHALIUM leontopodium. See Leontopodium Alpinum.

GYPSOPHILA cerastoides. An excellent plant for the rock garden bearing a profusion of large white flowers veined with pink.

paniculata. A spreading plant bearing clouds of feathery white flowers during July and August. Excellent for cutting and dry bouquets; 2 to $2\frac{1}{2}$ feet.

*repens. A very attractive trailing plant for the rock garden or dry wall. Covered with minute white flowers during the summer.

HEDYSARUM coronarium. Interesting leguminous plant; flowers pink and white. June to August. Half shade in the hardy rock garden.

HELENIUM Biglovi (Sneezewort). A sturdy plant bearing deep yellow flowers with black disc on long stiff stems. Prefers a damp soil in full sunlight.

Hoopesi. Very large orange-yellow flowers from June throughout the summer. 3 feet. A fine plant for the hardy border.

*HELIANTHEMUM (Rock Rose). Low growing evergreen plants useful for the rockery. Prefer a dry, sandy, sunny location.

mutabile. Flowers mostly yellow and pink. June to August.

HELIOPTUS Maximiliani (Hardy Sunflower). The latest of the helianthus. Golden yellow flowers borne on long graceful stems during September and October. 5 to 7 feet.

orgyalis. Yellow flowers appearing during September and October on long stiff stems. 6 to 8 feet.

harbalium Ligeri. Large flowers, dark yellow, brown center. July to September. 3 feet.

HELIOPSIS, compacta floribunda (Hardy Zinnia). Dark yellow. All Heliopsis are fine cut flowers.

Pitcheriana, Ernst Ladhams. New orange-yellow.

seabra excelsa. Rich chrome-yellow flowers turning to a bright yellow on maturity.

*HELLEBORUS niger (Christmas Rose). Grows from 1 to 1$\frac{1}{2}$ feet with white or red flowers. Natural blooming period from December to March.
HEUCHERA—Continued.
sanguinea splendens. A robust plant growing from $1\frac{1}{2}$ to 2 feet high with coral-red flowers. Desirable for either border or rockery.

HIERACIUM villosum (Hawkweed). Silvery foliage with showy yellow flowers. Nice for the rock garden.

*HORMIUM pyrenaicum. Plant growing from 6 to 8 inches with blue-violet flowers from May to July. Desirable for the rock garden.

*HUTCHINSIA alpina. Small alpine plant growing from 2 to 4 inches high with white blossoms during May and June and frequently much later.

Auerswaldi. Dwarf alpine plant growing 2 to 3 inches with high splendid white flowers during April and May. Excellent for the rock garden.

HOUSTONIA. See Native Plants.

HYACINTHUS candidus. See Galtonia.

*HYPERICUM (St. John’s Wort). Useful plants for the rock garden; taller varieties for the border.

calycinum. A splendid ground covering variety with large yellow flowers.

*coris. A good variety for the rock garden. Small bluish green leaves; lovely yellow flowers. Height 6 to 8 inches. Flowers in June and July.

*olympicum. Leaves grayish green; large yellow flowers. 6 inches. June and July.

HYPERICUM—Continued.

reptans. Distinct prostrate type; soft yellow tinged with brown and fine for covering rocks.

*IBERIS gibraltarica (Hardy Candytuft). Desirable plant for the hardy border and rock gardens. Grows 8 to 10 inches. Flowers are dark lilac in color, appearing during June.

Tenoreana (Tenore Candytuft). Dwarfier form, growing about 6 inches tall, with white and pinkish rose flowers during April and May.

sempervirens. Evergreen leaves; snow white flowers in April and May. 9 inches.

INULA glandulosa grandiflora (Fleabane). Free-blooming plant with large coarse leaves and composite flowers borne in long loose clusters on stiff stems; orange-yellow in color. $2\frac{1}{2}$ to 3 feet. June and July.

macrocephala. Golden yellow flowers in August. 3 to 4 feet. Fine as a cut flower.

*ensifolia. Interesting plant for the rock garden or border. Forms compact symmetrical clumps which are covered with bright yellow flowers. July and August.

GUNThER GARDENS

LEUCANTHEMUM. See Chrysanthemum.

*Liatris (Blazing Star; Gay Feather).

Pycnostachya (Kansas Gay Feather). Very showy and attractive perennial for the hardy border, with long graceful spikes of light rosy purple flowers from July to September. 3 to 5 feet. Excellent for cutting.

Lilium (Lily). See also Bulbous Plants.

Regale (Regal Lily; Lilium myriophyllum). A hardy garden lily with white flowers slightly suffused with pink with an exquisite shade of canary-yellow at the center. Delightfully fragrant. Blooms out-of-doors in July. 2 to 3 feet.

tenuifolium. A small slender growing lily having bright scarlet flowers with recurved petals. Blooms in early June. One of the more desirable lilies. 18 inches.

ISATIS glauca. 2 to 4 feet. Yellow flowers.

*Jasion. Lovely alpine plant about 1 foot high. Flowers June and July.

Knautia arvensis. A very nice Scabiosa-like flower of lilac color. 2 feet tall. Splendid to naturalize dry meadows.

*Lamiun maculatum (Dead Nettle). Straggling and half trailing perennial. Fine for the rock garden. Purplish red flowers.

Lavatera thuringiaca. A perennial pink-mauve flower with excellent foliage. Flowers July and August.

Leontopodium alpinum (Edelweiss). Small low growing plants 3 to 4 inches high with large sulphur-yellow flowers appearing all Summer. Fine for the rock garden.

Himalayense. Blooms later than L. alpinum with smaller yellow flowers.

Sibiricum. About the same as the above. A stronger bloomer and a more vigorous grower.
LINARIA cymbalaria (Toad Flax; Kenilworth Ivy; Mother of Thousands). A very neat creeping perennial. Excellent for ground covering and for growing in the rock garden and on the dry wall. Minute lavender and purple flowers during the summer.

macedonica. Violet-blue foliage with golden yellow flowers, looks like a snapdragon. A fine plant for naturalizing on dry banks and in parks.

*LINUM alpinum (Flax). A charming plant for the hardy border. A rare species from the Dauphine; of somewhat prostrate habit with pale blue flowers throughout the summer. Effective in the rock garden when grown in full sun.

flavum. Transparent yellow flowers. Most attractive.

narbonnense. Best blue variety; compact growth makes this plant valuable for the rockery.

perenne. Most attractive in both foliage and flower. Beautiful pale blue on slender graceful stems in May and June. 2 feet.

LOBELIA cardinalis (Indian Paintbrush; Cardinal Flower). A handsome border plant with rich vivid scarlet flowers on spikes 2 to 3 feet long from July to September.

LUNARIA rediviva (Moonwort). A perennial suitable for the shady border. Fragrant purple flowers during May and June.

*LUPINUS (Lupine). Lupines are fine plants for cut flowers as well as massing. They prefer a soil that has good drainage. An excellent plant for naturalizing on dry slopes.

polyphyllus. Among the showiest perennials for the hardy border, preferring a semi-shaded position with well drained soil. Blooms from May to July and grows from 1 to 1 1/2 feet high.

dayphylus albus. White flowers.

dayphylus coerules. Blue flowers.

Moerheimi. Beautiful pink.

dayphylus roseus. A bright clear pink.
**LYCHNIS alpina** (Campion; Ragged Robin; Jerusalem Cross). An attractive alpine with cushions of rich green leaves. Flowers pink or white; May.

**chalcedonica.** A showy perennial bearing heads of bright scarlet flowers appearing from June to September. A most desirable plant for the hardy border. 2 to 2½ feet.

**Haageana.** Brilliant orange-scarlet flowers in June and July.

**viscaria splendens.** Deep pink, somewhat resembling Gilliflowers and appearing in June.

**lydium.** A very fine plant for the rock garden.

**punctata.** Desirable perennial growing from 2 to 2½ feet and bearing yellow flowers in June and July.

**LYTHRUM superbum roseum** (Purple Loosestrife). A desirable perennial to plant in the shrubby border or along streams and ponds. Spikes of rose-pink flowers. July to September.

**MALVA moschata** (Musk Mallow). Strong growing perennials with smooth foliage on smooth satiny stems. 3 to 4 feet high. The large single hibiscus-like flowers often measure 5 inches across and come in various colors including white, pink and red. June to September.

**MECONOPSIS cambrica** (Welsh Poppy). Pale green hairy leaves with large pale yellow poppy-like flowers on slender stems. 1 foot.

**MEUM athamanticum** (Spingel). A glabrous tufted aromatic plant growing from 1 to 2 feet tall with flowers in terminal compound umbels in white, whitish yellow and pink.
MICHAUXIA campanuloides. A sturdy growing perennial with large bristly leaves and curiously drooping white flowers tinged with purple. 4 to 5 feet.

MIMULUS cardinalis. 2 to 4 feet with red and yellow flowers.

MOEHRINGIA muscosa. See Arenaria.

MONARDA didyma kelmiana (Oswego Tea; Bee Balm; Horse Mint). Like most mints their foliage is aromatic; flowers are violet-red. Grows 2 to 3 feet tall.

MOINA longifolia (Himalaya Thistle). A hardy interesting plant for the border or rock garden with interestingly toothed leaves. Flowers are very showy, deepening from white in the bud to crimson. 2 to 3 feet. June to August.

*MYOSOTIS alpestris (Forget-Me-Not). A dwarf perennial growing 3 to 8 inches high and producing somewhat spreading plants with bright blue flowers said to be fragrant in the evening. Makes a pleasing combination with tulips, hyacinths and pansies or in mass effect alone. Excellent for the rock garden.

alpestris alba. White flowers.
alpestris coerula. Deep blue flowers.
alpestris elegantissima. Indigo.
alpestris nana rosea. Beautiful rose color.
palustris. Forget-Me-Not that thrives best along streams; fine for naturalizing. Large blue flowers; good bloomer.

MULGEDIUM Bourgeai. Interesting foliage resembling that of a lettuce plant. Splendid for the large shady rock garden. Flowers pink, shading into lilac. Height, 3 to 5 feet.

*NEPETA Mussini (Ground Ivy; Catnip; Catmint). Excellent plant for any position. Dwarf, compact habit of growth. 1 to 1 1/2 feet in height and producing an abundance of lavender flowers. A good plant for the rock garden.

OENOTHERA (Evening Primrose). Plants that desire a sunny position and a soil with good drainage.

*caespitosa. Dwarf variety with pink blossoms. Fine for rockery.

Fraseri. Dwarf. Leaves brownish green; flowers deep yellow. July to September.
PAPAVER alpinum (Poppy). Daintly plant very much like a miniature Iceland Poppy with flowers in white, pink, orange and yellow and sometimes delicately fringed. Desirable for the rock garden. (In pots only).

bracteatum. A large poppy somewhat resembling the Oriental Poppy in size. Flowers of a clear bright scarlet with black base. Good for the hardy border, rock garden, and for planting in open spaces in the shrubbery border. (In pots).

*nudicaule* (Iceland Poppy). Desirable plant for the rock garden. Foliage of a bright color and produced in dense tufts from which spring throughout the season cup-shaped flowers of various colors borne on slender leafless stems 1 foot high. (In pots).

*nudicaule aurantiacum* (coccineum). Orange color.

*nudicaule giganteum*. Extra large flowering Iceland Poppy of orange color.

*nudicaule roseum*. Flowers of a beautiful clear pink.

---

OENOTHERA—Continued.

fruticosa major. Flowers somewhat larger than the preceding ones. Yellow flowers, excellent bloomer. June to August.

*missouriensis*. Plants with large effective leaves and large yellow flowers; trailing habit; sunny position in rockery. June to August.

speciosa. Large white fragrant flowers with small foliage. Splendid for massing. Prefers dry place.

*NIEREMBERGIA rivularis* (White Cup Flower). Interesting creeping alpine, belonging to the nightshade family. Flowers creamy white. June to September. Desires moist, sunny or half-shady location; some protection in winter.

ONONIS hircina. Pinkish flowers appearing June to August. 1 to 1½ feet high. Prefers a sunny exposure. Plant between ground covering plants.

OROBUS vernus. Carmine-red turning to a bluish color. Blooms from March to May. 1 foot.
PAPAVER ORIENTALE (Oriental Poppy).
A very desirable perennial for the herbaceous border and for planting in open spaces in the shrub border. Very large cup-shaped flowers springing from a heavy growth of beautiful light green fernlike foliage and of a vivid crimson-scarlet color with purplish black blotches at the base of the petals.

Papaver orientale, Brilliant. Very showy red color.

Peonies
(Paeonia Sinensis)

Alexander Dumas. Early midseason. Light violet-rose with a creamy white collar of narrow petals; fragrant and a free bloomer. Good for cut flowers.

Asa Gray. Late; pale lilac. Very fragrant.

Baroness Schroeder. Midseason. Flesh white, fading later to a milky white. Very large and fragrant.

Claire Dubois. Late; tall growing with large flower of a uniform deep violet-rose tipped with white.

Couronne d'Or. Late white with tints of yellow rising from a few stamens showing midst the petals. Large and of a fine form. Free bloomer.

Delachei. Late midseason. Violet-crimson; flower large and compact.

Elizabeth Barrett Browning. Very late. A beautiful pure white peony of full rose type and of good substance. A most desirable white peony.

Eugenie Verdier. Late. Pale hydrangea-pink flowers with outer guard petals of a lilac-white. Very large and compact. Fragrant.

Frances Willard. Late midseason. White with a distinct shading of clear yellow as the flower first opens which later fades into a paler yellow. Very distinct and of excellent form.
PAEONIA SINENSIS—Continued.

La Rosiere. Midseason. Pure white shading to a creamy white toward the center and having pale green carpels with white stigmas. A beautiful peony.

Le Cygne. Midseason. Milky white with a touch of pale green at the heart. A very fine white peony.

Mme. de Verneville. Early. Pure white flowers with blush center when first opening which later fades to a clear white with carmine flecks. Fragrant.

Mme. Emile Galle. Late. Deep lilac-white often changing to a milky white in the center. Full and compact.

Mme. Forel. Late. Violet-rose with silvery tipped center. Large and compact. Fragrant.

Marie Lemoine. Very late. Pure white with a creamy white center. Large and compact. Fragrant.

Martha Bulloch. Midseason. A beautiful rose-pink of good color and form.

Philomele. Midseason. Amber-yellow center with guard petals of bright violet-rose. As the flower develops there appears a distinct crown of bright rose-pink edged with dark crimson. A free bloomer and a very unusual flower that has a delightful fragrance.

Solanje. Late. Outer petals lilac-white deepening toward the center with shadings of salmon-pink. Large, full and compact.

Suzette. Midseason. A beautiful shade of rose-pink of good color and fragrance.

Therese. Midseason. Violet-rose changing to lilac-white towards the center. Very large and compact.

Walter Faxon. Midseason. Bright rose deepening towards the center. A very distinct and charming peony.
PENTSTEMON (Beard Tongue). Fine for cut flowers; dwarf growing varieties suitable for the rockeries in a sunny location.

angustifolius. Grows 1 to 1\(\frac{1}{2}\) feet high. Flowers blue, sometimes varying to lilac or white.

alpinus confertus. Beautiful blue flowers. 6 to 10 inches high. Creeping habit.

barbatus hybridus. Scarlet-red flowers appearing July to September.

glaber. Desirable garden plant growing 1\(\frac{1}{2}\) to 2 feet high with violet-purple flowers appearing from May to July.

pubescens. A fine plant for the wall or rock garden. Stems growing 1\(\frac{1}{2}\) to 2 feet high and covered with numerous flowers shading from violet to flesh-pink. Prefers a hot, dry exposure.

speciosus. Lovely blue color; an excellent cut flower. Keeps well.

PHLOX—Continued.

Bridesmaid. Tall. Pure white with crimson eye.

Dr. Konigshofer. Scarlet.

Eclaireur. Rosy magenta.

Elizabeth Campbell. Light salmon-pink.

Europa. Large white with carmine eye.

Flora Riedy. An excellent white.

Miss Lingard. Early white with pale lilac eye.

Mrs. Jenkins. Tall growing; white.

R. P. Struthers. Bright rosy-carmine with red eye.

Rheinlander. Soft pink with deeper pink eye.

Rosalind. Large carmine flowers with a decided clover scent.

Rijnstroom. Carmine-rose.

Siebold. Orange-scarlet with crimson center.

Thor. Deep rose-pink with red eye.

Von Hochberg. Bright crimson.

Von Lassburg. Large pure white.

Widar. Lavender-blue shading to white toward center.

PHYSOSTEGIA virginica (False Dragonhead). A desirable midsummer flowering perennial with pink flowers useful for cutting. 1 to 2 feet.
PHYTEUMA orbiculare (Horned Rampion). Sky blue flowers borne on slender stalks 1 to 1 1/2 feet high and appearing in May and June. Splendid in the rock garden. Sweet scented.

spicatum. Pale yellowish white flowers appearing in May and June, growing 1 to 2 feet high.

PLANTAGO major folius purpureus (Plantain). Is fine for naturalizing in dry sunny places. Leaves are of a pink tinged color. Plant can be used on dry sandy places; effective in masses.

maritima. Leaves are small and give a grass-like appearance in dry places.

*PLATYCODON Mariesi (Balloon Flower). Splendid flowering perennial. July to September. Flowers large; purplish blue color.

PLUMBAGO larpentae. A most desirable plant for border or rock garden; dwarf and spreading; dark blue. Flowers well all summer and fall.

POLEMONIUM (Jacob's Ladder) coeruleum (Richardsoni). Erect stems bearing sky-blue flowers. June to July. 1 to 1 1/2 feet.

*confertum pilosum. A very desirable rock-ery plant. Very dwarf flowers in dense heads of saucer-like bells of a rich clear blue. 8 to 10 inches.

himalayense. Dwarf variety for the rock garden. Flowers sky blue.

POLYGONUM alpinum (Knapweed). A prolific bloomer during May and June. Long spikes of white flowers. Excellent border plant; can also be used for naturalizing in parks. Sunny location best. 3 to 4 feet.

bistorta. Plant growing 2 to 3 feet with reddish white flowers during May through to September.

sachalinense. This variety is most effective as a single specimen plant for the large park or at the edge of water where it has room for expansion.

POTENTILLA (Cinquefoil). Exceptionally fine plants, strawberry-like leaves, and of easy culture. Excellent for park, rock garden or border planting.

alpestris. Golden yellow flowers.

*nepalensis hybrida. Beautiful rose color blooming during July and August. 1 to 1 1/2 feet.

pyrenaica. Golden yellow flowers appearing in July and August. 10 to 12 inches.

tridentata. See Native Plants.

*PRIMULA acaulis alpina (Hardy Primrose). One of the most desirable plants for the rock garden. Foliage in thick rosettes from which rise the flower stalks bearing blooms of various colors with exceeding fragrance. 6 to 8 inches.

acaulis. Dainty primrose growing from 5 to 10 inches with sulphur-yellow flowers during March and April.
GUNTHER GARDENS

Phlox, B. Comte. (See page 48).

Chrysanthemum (Shasta Daisy). (See page 50).

Gaillardia grandiflora—Blanket Flower. (See page 12).

Gypsophila paniculata—Baby’s Breath. (See page 39).
Tritoma hybrida elegans—Red Hot Poker Plant.  
(See page 56).

Primula acaulis—Hardy Primrose.  
(See page 49).

Statice tatarica—Sea Lavender.  
(See page 49).

Platycodon Mariesi—Balloon Flower.  
(See page 49).
PRIMULA—Continued.

acaulis coerulea. Beautiful shades of pink and blue.
denticulata grandiflora. Very handsome large flowering primrose with flowers in varying shades of lilac. Prefers a moist shady position. 2 feet.
elatior. Flowers in whitish yellow and different shades of red. 10 to 12 inches.
Helenae (P. pruhoniciana). Deep blue-violet flowers.
japonica. Handsome hardy primrose bearing large whorls of blossoms in white, crimson, and pink in many rich shades. Prefers a moist situation and grows 2 to 3 feet high.
luteola. A robust growing primrose with attractive foliage and heads of pale yellow flowers about 6 inches high.
sikkimensis. Sulphur-yellow flowers appearing in May and June.
veris elatior. An English strain of Primrose with clear yellow flowers. 6 to 8 inches.
veris elatior aurea grandiflora. Same as above with larger flowers.

veris elatior glodrandige (Cowslip Primrose). The common English primrose so favored for naturalistic planting. Yellow.

*PRUNELLA grandiflora (Self-heal; Heal-all). A fine plant for the rock garden and partially shaded portions of the hardy border. Pink and white and purple flowers all summer. Excellent cut flower.

Webbiana. Purple-violet; fine for edging or rock garden. Prefers sun or half shade and not too dry location.

PYRETHRUM (Persian Daisy; Painted Daisy). Pyrethrums are excellent cut flowers and border plants.
aureum Tchihatchewi. Dense foliage less than 1 inch in height from which many white daisy-like flowers spring on slender stems 4 to 6 inches. Spreads rapidly and makes a good ground covering. Valuable for dry exposures and rock gardening.

carneum. Light pink color; one of the most valuable cut flowers for florists.

parthenifolium aureum (Golden Feather). Light yellow foliage and white flowers, useful for edging beds and borders. June and July. 1 foot tall.

roseum. One of the hardiest and most desirable of the perennials. Fernlike foliage with pink flowers.

hybridum. An improved variety with larger flowers ranging from white through shades of pink to crimson. May to July.

uliginosum. Tall growing perennial. Desires moist situation. Lovely light green foliage and white flowers. 4 to 5 feet. August to October.

PULMONARIA angustifolia azurea. 6 to 10 inches with sky-blue flowers in April and May.

RANUNCULUS asiaticus giganteus florentinus (Buttercup). Yellow or red flowers during May and June. 1 foot.

RHEUM Collinianum. Lovely red flowers appearing during May and June.

*RODGERSIA. Very decorative Saxifraga, for the shady hardy rock garden.
sambucifolia. White flowers during July and August. 1½ feet.
GUNther Gardens

Saponaria ocymoides. A desirable plant for the hardy border or rock garden, bearing white flowers from May to August. 1 foot.

RuBbeKia Newmanni (Coneflower). (See Native Plant list). Perennial form of the "Black-Eyed Susan." Deep orange-yellow flowers with dark purple cones borne on long, wiry stems 2 to 3 feet high and appearing all summer.

purpurea hybrida (Giant Purple Coneflower). Peculiar reddish purple flowers with a very large, brown, cone-shaped center appearing from July to October.

subtomentosa. A more compact grower which forms a complete bouquet of orange-yellow flowers with dark centers.

Ramondia. A very interesting alpine that requires proper planting in the rock garden so the water cannot lodge in the crown. Prefers acid soil, and moist shady places.

pyrenaica. Leaves form a complete rosette; dark violet flowers. June.

*Sagina Linnaei. A delightful little plant for the rock garden. Foliage is fine, soft and appears in a thick mass from which springs up minute white flowers.

Salvia azurea (Meadow Sage). A western species bearing sky-blue flowers on long graceful stems during August and September. 3 to 4 feet.

Pratensis. A dwarf growing form bearing blue flowers in June.

Pratensis flore pleno. A double flowering form of the preceding.

Przewalski. Plant growing 1 1/2 to 2 feet high. Blue flowers.

sylvestris. Violet-purple flowers appearing in July and August on stems 2 to 2 1/2 feet long.

turkestanica. A Salvia having sweet scented foliage and showy whorls of white flowers touched with pale pink.

Saponaria multiflora compacta (Soapwort). Lovely pink flowered perennial. Long spikes of flowers 2 to 3 feet high, in July and August.

*S. ocymoides. A desirable plant for the hardy border or rock garden, bearing white flowers from May to August. 1 foot.
SAXIFRAGA aizoides (Megasea). Alpine plant with orange, yellow and purple-brown flowers appearing during July and August.

decipiens (Crimson Moss). Interesting alpine; easy grower; nice green foliage. 4 to 5 inches high. May and June.

hybrida plunentepich. Scarlet flowers. 6 inches. Forms a solid cushion.

hybrida purpurmantel. Very unique purple color. 6 to 8 inches.

muscoides (S. moschata). Alpine plant growing 3 to 4 inches high with white flowers. Forms solid white cushions.

tegasia. A splendid foliage; border or rock garden. Colors chiefly rose and pink.

rhei superba. Deep rose colored flowers. 4 inches. Large flowers.

SCUTELLARIA baicalensis coelestina (Skullcap). Clear blue flowers, resembling those of a snapdragon in shape, are freely borne on thin wiry stems from early summer until frost. 1½ feet.

SCABIOSA (Pincushion Flower) caucasica (Blue Bonnet). A desirable border plant succeeding in any garden soil if well drained. Grows 1½ to 2 feet high. Flowers of a beautiful shade of lavender and appear from June to September. Fine cut flower.

SCHIEVERCKIA Bornmuelleri. A lovely little alpine forming cushions with beautiful white flowers 3 inches tall. April.

SEDUM (Stonecrop). Lovely perennials of a dwarf or medium character. They generally flower during the summer. Excellent plants for the rock garden, dry walls, edging and ground covering.
aizoon. A desirable rock garden plant bearing bright yellow flowers during July and August. 1 foot.

acre. Foliage green all Winter, yellow flowers. Fine for covering dry slopes.

alba. A dwarf spreading plant for the rockery with waxy foliage and white flowers. 6 to 8 inches.

album. A rockery plant with white flowers and thick waxy rounded leaves.

anglicum. Grayish foliage, quite mossy in appearance; delicate pink feathery blossoms. A most desirable plant for the rock garden. Needs slight protection.

kamschaticum. An interesting plant growing 6 to 10 inches high with yellow flowers.

laconicum. Thick round leaves, white flowers. July. 1 foot.

Maximoviczi. Grows 1 to 1½ feet high with yellow flowers.
SEDUM—Continued.

rupestre. Prostrate Sedum with reddish stems and brilliant yellow flowers in dense heads. 6 to 10 inches.

sexangulare. A trailing form. Flowers yellow, very slender with green moss-like foliage.

spurium. A desirable Sedum with thin broad leaves borne in a dense foliage mass a little over an inch in height and often taking on a bronze coloring. Flowers are a pinkish white. 6 inches.

*spurium coccineum. Same as the preceding with showy crimson flowers.

Sieboldi. Glaucous foliage; clusters of pink flowers in September. 10 inches.

stoloniferum. Smaller leaves than acre or spurium and light pinkish flowers during July and August. Sometimes sold as A. ibericum.

spectabilis. Very showy decorative Sedum. Fine for groups or as specimen plants. Flowers rose-purple. August and September. 1½ feet.

telephium. Purple flowers during August and September.

ternatum (Mountain Stonecrop). Native plant, flat leaves, the lower whorled in threes. Good for rockeries or border. Flowers white. August and September.

SENECIO clivorum (Groundsel). A desirable rock garden plant forming a neat tuft of foliage and clusters of orange-yellow flowers on slender stems 3 feet long from July to October.

Veitchianus. A plant for the hardy border and rock garden, growing 2½ to 3 feet high and bearing striking yellow flowers in August.

Wilsonianus. Grows 3 to 4 feet high. Golden yellow flowers in August and September.

SIDALCEA Rosenknopse (Greek Mallow). An erect growing plant producing showy flowers during June and July. Does well in any good garden soil. 2 to 3 feet.

*SILENE alpestris (Catchfly). A delightful plant with pure white flowers borne on slender wiry stems from 3 to 4 inches high.

alpestris grandiflora. Same as the former but with larger flowers and sturdier growth.

Schafta (Autumn Catchfly). A charming border or rock plant with bright pink flowers from July to October; grows 4 to 6 inches high.

SISYRINCHIUM angustifolium. Blue-violet flowers during May and June. Desirable for woodland planting.

SOLDANELLA alpina. Rock plant, 4 to 6 inches high, flowering during May and June. Excellent for the rock garden.

*SPIREA (Goat’s Beard; Meadow Sweet). Splendid cut flower and border plant with long pyramidal spikes of flowers; suitable for planting along streams or around bogs.

filipendula. Fernlike foliage; creamy white flowers. June. 1 foot. Moist location.

STACHYS lanata (Woundwort). Good as a ground cover or edging plant. Foliage silvery white. Flowers purple; prefers dry sunny slope.

STENANTHIUM. See Novelties.

STATICE tatarica (Sea Lavender). A plant growing 1 foot high with white and rosy pink flowers during July and August. Desirable for the rock garden or edging borders.

Sedum spurium coccineum.
STOKESIA cyanea (Cornflower Aster). A beautiful plant growing 18 inches high and bearing lavender-blue flowers freely from June to September. Of easiest culture and thrives in most any position in the garden. Dry soil. In pots only.

TELEKIA speciosa (Buphthalmum speciosum). Tall growing plant attaining a height of 3 to 5 feet with orange-yellow flowers during June and July.

TELLIMA grandiflora. Yellow flowers appearing on stems 1½ feet high during May and June. Red foliage.

THALICTRUM aquilegifolium (Meadow Rue). A very beautiful plant with fine cut foliage and white flowers in feathery masses during June and July. Borne on stems 3 to 4 feet high.

dipterocarpum. A most desirable species for the hardy border with fine cut foliage and large graceful sprays of violet-mauve flowers on stems 4 feet high.

THYMUS lanuginosus (Thyme). Woolly leaved; splendid for dry sunny place.

serpyllum coccineus (Scarlet Thyme). A valuable plant for the rock garden or edge of the border. Dark green foliage and bright red flowers.

TRADESCANTIA. See Native Plants.

virginiana. 2 feet. Blue flowers all summer.

TRITOMA hybrida elegans multicolor (Red-Hot Poker; Flame Flower; Torch Lily). A lovely cut flower ranging from yellow to orange-red. 3 to 4 feet. August to October. Treat like Dahlias.

TROLLIUS asiaticus Salamander (Globe Flower). 1½ feet high. Dark yellow flowers from April to June.

asiaticus Golden Sun. 1½ feet high. Brilliant yellow flowers from April to June.

pulchella. Forget-Me-Not blue; fine for cutting. 1½ feet high.

repens. A desirable Speedwell for the rock garden or carpeting areas. Light blue flowers.

TUNICA saxifraga (Coat Flower). A pretty tufted plant with light pink flowers produced all summer. Desirable for the rock garden or hardy border.

VALERIANA rubra (Valerian; Garden Heliotrope). A desirable garden plant producing showy heads of reddish flowers from June to October on stems from 1½ to 2 feet high.

VERBASCUM olympicum (Mullein). Tall growing perennial with large silvery green leaves. Fragrant yellow flowers. Suitable for large parks; big estates; for mass effect. 3 to 5 feet. July to August.
VERBASCUM—Continued.

phoeniceum. Very attractive border plant growing about 2 feet in height, and having flowers of various colors, including white, pink and violet, borne on graceful stems.

*VERONICA amethystina (Speedwell). Fine rock plant with flowers of lilac-blue color. July and August. 15 inches.

*gentianoides. Lovely green foliage with spikes of pale blue flowers. 1 foot. Suitable for rock garden.

incana. A plant with bright silvery foliage and spikes of amethyst-blue flowers during July and August. 1 foot.

latifolia. Lilac-blue flowers 1 to 1 1/2 feet high, appearing in May.

longifolia subsessilis (Japanese Speedwell). The showiest of all the Speedwells. A bushy growing plant with dense spikes of deep blue flowers from June to September. 2 to 3 feet. Loves moist location.

*prostrata. A low growing plant from 4 to 8 inches high with light blue flowers from May to July. Desirable for the rock garden.

*teucrium rupestris. 6 to 12 inches in height. Dwarf, spreading, with blue flowers. May and June.

VINCA. See Native Plants.

*VIOLA bosniaca (Tufted Pansies). A most desirable everblooming Pansy. Reddish violet flowers appearing throughout the summer. Excellent for rock garden and hardy border.

*cornuta. A most desirable plant for shady places in the rock garden or hardy border. Blooms profusely and perfectly hardy. The following are desirable hybrid types.

admirabilis. Three and five blotches; hybrids rich in color.

Admiration. Soft purple with dark blotch.

Alpha. Dark blue.

Firmament. Sky blue.

G. Wermig. Large blue flowers profusely borne all summer.

Hansa. Beautiful clear blue.

Ilona. Claret red.
VIOLA—Continued.

Perfection. Deep purplish blue.
rosea. Pink.
Schwarzer Prinz. Very dark purplish blue.
Thuringia. Dark blue with white eye.
gracilis. A desirable little species from Greece; of graceful trailing habit. Fine for the rock garden.
odorata. Most desirable for the hardy border and for woodland planting. Kaiserin Augusta, dark blue; Czar fl. pl., very large, blue.
tricolor maxima. Beautiful and rich in coloring. Most desirable for spring effects in the garden.

VISCARIA cardinalis. See Lychnis.

*WAHLENBERGIA grandiflora. Beautiful free flowering plant especially suitable for the rock garden. Flowers of a deep soft blue and profusely borne.
grandiflora alba. Same as the foregoing but having white flowers.
*WULFENIA. Perennials suitable for the garden and border.
corinthiaca. Lovely for the hardy shady rock garden; fine foliage. Excellent blue spikes of flowers. July. 1½ feet.

*YUCCA (Adam’s Needle). Showy perennial. Can be used as specimen plant, rockery or mass effect. Spikes 4 to 6 feet. Creamy white flowers. July and August.

Water Lilies - Aquatics

It is just as natural for water lilies to thrive and bloom as it is for the more common plants to grow; in fact a water garden requires a surprisingly small amount of attention. And yet they have an allurement not found in other plants.

In the limited space of this catalog we are unable to give an itemized list of our offerings in aquatics. We shall be glad to hear from those interested—whether in a single plant or in the design and execution of elaborate pools and water gardens—that we may make special quotations.
Plants for the Bog Garden

**ACORUS calamus** (Sweet Flag). Small, inconspicuous blue flowers; leaves 1 to 3 feet long. Very desirable.

**ASTER puniceus** (Swamp Aster). Tall growing plant with lilac-blue flowers in late summer.

**CALLA palustris** (Common Calla; Water Arum). Broad, cordate leaves which appear above the water; most effective for their foliage contrast in marginal plantings along water; white spathe.

**CALTHA palustris** (Marsh Marigold). Bright yellow flowers. April to June.

**CORNUS canadensis** (Bunchberry). 5 to 8 inches high with pointed leaves and greenish white flowers in small clusters followed by brilliant red berries in late summer. Very effective.

**DIONAEA muscipula** (Venus’ Flytrap). A very unusual and interesting insectivorous plant with small white flowers.

**HEMEROCALLIS** (Day Lily), *flava* (Lemon Lily). Long, slender leaves and large, fragrant flowers. Lemon-yellow in color. May.

**IRIS ochroleuca gigantea**. Very distinctive, producing numerous pale yellow flowers in May.

**pseudacorus** (Water Flag; Yellow Flag; Bearded Flag). 3 feet high with flowers of a beautiful yellow shaded to orange.

**sibirica** (Siberian Iris). Long, slender leaves 2 to 3 feet in length with long, stiff stems bearing clusters of purplish blue flowers during May and June.

**sibirica alba**. Same, having white flowers.

**MERTENSIA virginica** (Virginia Bluebells). A very desirable perennial having beautiful blue flowers in May.

**MONARDA didyma** (Oswego Tea; Horse Mint). Beautiful, compact heads of bright red flowers from June to August.

**didyma rosea**. Has rose colored flowers.

**didyma violacea superba**. Has deep amaranth-red flowers.
PLANTS FOR BOG GARDEN—Continued.

*SANGUINARIA canadensis (Bloodroot). An attractive plant on account of its large, white flowers in May.

*SARRACENIA (Pitcher Plant; Side-Saddle Plant; Devil’s Boots; Forefathers; Cup Trumpets). A most extraordinary and interesting plant grown for its oddity and interest.

SARRACENIA—Continued.

flava. 1 to 3 feet high with yellow flowers of a rather pungent odor.

flava atrosanguinea. A variety having the pitcher and lid of the leaf a dark crimson-claret.

purpurea. Pitchers are dark green to purple.

SAXIFRAGA virginiensis. Small white flowers from April to June.

TYPHA latifolia (Common Cat-tail). Tall, elongated leaves, 5 to 6 feet long.

VACCINIUM macrocarpon (Cranberry) Small, pinkish white flowers in May followed by red fruit. An attractive and desirable plant.

Rock Plants
For the information and guidance of those who may not be familiar with the plants that are especially adapted to the rock garden, we have placed an asterisk (*) opposite the description of varieties we recommend for this purpose.
Iris Germanica (German or Flag Iris)

Florentina alba. Pure white with pale lavender cast. Very fragrant.

Germanica alba. The old favorite white iris. Very early.

Innocenza. The most beautiful pure white iris.

Dimity. White penciled with lavender. Profuse bloomer and very decorative.

Mme. Chereau. White delicately marked with light blue. Exquisite.

Caprice. The best all red iris.

Jacquesiana. Crimson standards and deep purplish red falls.

Magnifica. A superb red iris.

Aurea. Lemon-yellow standards and falls.

Foster's Yellow. Creamy yellow standards and falls.

Dalmatica. One of the finest lavender iris.

Lavandulacea. Standards clear lavender with darker lavender falls.

Speciosa. Dark lavender.

Her Majesty. Rosy pink standards and falls.

Trautlieb. A uniform soft rose-pink.

Souvenir de Mme. Gaudichau. A deep purple of most striking color.

Blue Jay. Standards of an intense blue with Falls of a deeper blue.

Imperator. Large dark blue.

Othello. Deep rich blue.

Pallida Dalmatica. Beautiful lavender-blue with silvery markings.

GUNThER GARDENS

Iris Germanica. (See page 61).
Lent. A. Williamson.
Nibelungen.

Muscari, Heavenly Blue. (See page 69).

Clematis paniculata. (See page 73).

Narcissus, King Alfred. (See page 67).
Lilium candidum. (See page 64).
Lilium regale. (See page 64).
Lilium speciosum rubrum. (See page 64).
Lilium auratum. (See page 64).
GUNTHER GARDENS

Lilium

Auratum. Gold-banded Lily. 3 feet. Large white flower spotted with crimson and having yellow band extending the length of each segment. Red anthers. Very fragrant. July and August.

Auratum platyphyllum. 4 feet. More robust growing with broader leaves and the large white flowers spotted with yellow. Very choice. July and August.

Batemanniae. 2 feet. Pale orange-red flowers occasionally tinged with pink, with red anthers. July and August.

Canadense. Meadow Lily; Wild Yellow Lily. 2 to 4 feet. Bright yellow flowers having red spots. July and August.

Candidum. Annunciation Lily; Madonna Lily. 2 to 4 feet. Glistening white flowers. A most desirable Lily. June and July.

Colchicum. 4 to 5 feet. Exquisite lemon-yellow flowers in June.

Davuricum. 2 to 3 feet. Scarlet flowers dotted with black. June and July.

Humboldti. 4 to 6 feet. Bright orange-yellow flowers spotted with deep purplish brown spots. Late June to early August.

Philadelphicum. Wild Red Lily. 2 to 3 feet. Yellow cup-shaped flowers shaded with orange towards the tips of the petals and spotted with maroon. Excellent for naturalizing. July.

Regale (Myriophyllum). Regal Lily. 4 to 6 feet. White waxy flowers delicately suffused with pink with a throat of canary-yellow at the center. Deliciously perfumed and an excellent Lily for the garden. July.

Rubellum. 1 to 2 feet. Deep rose-pink varying to white flowers with yellow anthers. Very fragrant. June to early July.

Speciosum rubrum. 2 to 4 feet. Fragrant deep red flowers with red anthers. August and September.

Speciosum album. 2 to 4 feet. Large white flowers with a greenish band running through the center of each petal. August and September.

Speciosum magnificum. 2 to 4 feet. Large flowers of a rich deep red color. August and September.

Superbum. American Turk’s-cap Lily; Swamp Lily. 3 to 4 feet. Bright reddish orange flowers spotted with purplish brown. July.

Thunbergianum (elegans). 1½ to 2 feet. Flowers produced in various shades of red, orange and yellow, slightly spotted with purplish black. June and July.

Tigrinum simplex. Single Tiger Lily. 3 to 5 feet. Brilliant orange-red flowers spotted with black. A popular and general favorite for the garden.

Lilium superbum.
Botanical or Wild Tulips

The following tulips are all wild species, nearly all natives of Central Asia. Their colors are mostly bright and many of them have pointed or reflexing petals. The right place is the rock garden, where their flowers are seen to advantage and in native borders.

AUSTRALIS (Celsiana). Yellow, tinged red-dish bronze on outside of petals. A pretty species, somewhat resembling T. sylvestris. Is found growing in Spain and Southern Europe. Height 16 inches. Flowering in April.

BILLIETIANA. Carmine-rose, shaded lighter, with white center off the petals. Found growing in Turkestan. Height 14 inches.

CLUSIANA (The Lady Tulip). Outer petals bright cherry-red, inner petals creamy white with violet base. Small flower but very distinct and beautiful. It is found growing in Southern Europe. Height 8 inches.

*CORNUTA STENOPETALA (Acuminata, Sinensis). Yellow, streaked red; very narrow petals tapering at the top to a thread-like point. More odd than handsome. Height 15 inches. Very interesting and curious in a collection.

DIDIERI SCARLET. Glowing scarlet, shaded black at base. Height 14 inches.

EICHLERI. Crimson-scarlet shaded orange with glistening black center marked with gold. Tremendous flower. Turkestan. Highly recommended. Height 8 inches.

*FLORENTINA ODORATA (Sylvestris). Pure yellow; medium size, drooping flower. A sweet-scented wild English Tulip. Fine for naturalizing but must become established before it flowers freely. Height 14 inches.

GREIGI. Brilliant glowing scarlet, center having large conspicuous maroon-black blotches. Foliage beautifully spotted brown. Height 9 inches.

*HAGERI. Dark crimson-scarlet, globular flowers with black center, shaded bronze and yellow. Height 16 inches.

*KOLPAKOWSKYANA. Deep yellow, shaded rose on exterior of petals. Height 20 inches.

MARJOLETII. Soft primrose, shaded carmine-red at base; small flower of very attractive coloring. A tulip from Savoy, flowering about the second week in May. Height 14 inches.

MAURIANA. Brilliant glowing scarlet with golden center. April flowering. Height 21 inches.

MICHELIANA. Scarlet-carmine shaded base black and yellow, somewhat resembling T. Greigi. The leaves are faintly brownish lined. Height 22 inches.

PERSICA (Breyiana). A charming dwarf tulip for narrow borders or the rock garden. Inside brilliant yellow, outside golden bronze, very fragrant. Several flowers on branched stems. Height 3 inches.
BOTANICAL or WILD TULIPS—Continued.

PRAESTENS suaveolens (Sylvestris, Regel’s Var.). Large and bright orange-scarlet. Several flowers on branched stems. Height 14 inches. April flowering.

PULCHELLA. Brilliant glowing crimson-carmine to carmine-rose with blue center. Flowering in April with Crocus-like flowers. Height 5 inches.

SAXATILIS. Delicate rose with large bright yellow center. Flowering in April. Is found on the Isle of Crete. Height 9 inches.

SPRENGERI. Latest of all tulips to flower. Makes a handsome group in rock garden or border. Flowers are large; bright orange-scarlet. Grows from 8 to 10 inches tall and when established self-sows freely.

SUNDEW. Bright red, almost like the Parrot type. Novelty. Strong stem, highly recommended. Height 22 inches.

Lily-Flowering Tulips

As the result of hybridizing the dainty pointed-petaled Tulipa retroflexa with pink and other Darwins, we have here a new, very beautiful and distinct race of Tulips having graceful, slightly reflexing flowers on tall, sturdy stems. Height of lily-flowering tulips is about 25 inches.

*ADONIS. Long flower with reflexed petals. Vivid rosy red. A very elegant tulip.

ALASKA. Long flower with slightly reflexing outer segments, pure golden yellow.

APOLLO. Long flower with reflexed petals. Rosy salmon. The outer petals are slightly recurved.

ECLIPSE. Orange-yellow with outer reflexing segments. Very fine.

RETROFLEXA. Light yellow with recurving petals. Very decorative tulip. Height 16 inches.

SIRENE. A beautiful and most elegant Tulip Novelty, and one of the first of this new section, which is derived from crossing Tulipa retroflexa with a pink Darwin tulip. Color beautiful cerise-pink with pale pink at the margins of the segments and with a pure white base.

SOLFATARE. Pale yellow, a very fine egg-shaped tulip.

WHITE CROSS. A strikingly beautiful tulip. Large pure white flowers of which the inner petals stand erect while outer petals are recurved. Highly recommended. Height 20 inches.

WHITE DUCHESS. A pure white tulip of great beauty. Petals are undulated; very large flower. The finest white tulip. Very beautiful.
Miscellaneous Bulbs

CHIONODOXA gigantea (Allenii). Soft lavender, large flowers.
C. Luciliae. Bright blue, pure white center.
C. sardensis. Dark blue; lovely.

COLCHICUM autumnale. Minor, soft mauve.
Major (Byzantinum), lilac-rose; Flore Pleno, rose-lilac; Album, pure white; Album plenum, large double white.

Bornmulleri. Lilac, rose and white.
Conquest. Dark violet.
Glory of Heemstede. Dark violet.
Lilac Wonder. Violet-mauve.
Violet Queen. Lilac tinted violet.
Waterlily. Bright lilac-mauve, large double flowers.

Daffodils

BICOLOR, America. A large bicolor. Large yellow trumpet; white petals. Novelty.

Empress. Perianth-white. Trumpet rich yellow; large flowers.

Glare of the Garden. Like B. Empress, but large trumpet.

Glory of Sassenheim. One of the earliest bicolors. Strong grower.

Silver Spur. White perianth; yellow trumpet.

Victoria. Fine yellow trumpet; bold erect flower with creamy white perianth.

Ajax, Yellow Cervantes (Trumpet). Sulphur perianth; yellow cup. Early.

Yellow Emperor. Perianth deep primrose. Trumpet full yellow.

Yellow King Alfred. Intense golden yellow trumpet of great size and substance and refined finish.

Barri Conspicuus. Yellow petals, very fine scarlet cup, edged deep scarlet.

Masterpiece. Pure white perianth; scarlet cup. First class Cert. London.

Red Beacon. Brilliantly colored cup, perianth ivory-white, broad and of great substance, slightly shaded sulphur at base.

DAFFODILS—Continued.

Sir Watkin (Syn. The Giant Welsh Daffodil). Large primrose perianth with rich yellow cup. One of the best Incomparabilis varieties.

LEEDSI, Queen of the North. Large flower with very broad white perianth. Cup perfect form, lemon-yellow, prettily fluted. The finest and most beautiful of all Leedsis.

White Lady. An exquisite flower with a broad white perianth of perfect form and a dainty cup prettily crinkled of beautiful pale canary shade; very fine bloomer.

POETAZ, Early Perfection. Citron-yellow, tall grower. 4 to 6 flowers on the stem.

Laurens Koster. Pure white petals with yellow cup. One of the best and most free blooming.

Orange Cup. Perianth pure white; clear orange cup. Nearly double. One of the best.

POETICUS Ornatus. Perianth white; eye margined scarlet. One of the best.

ORANGE PHOENIX. Large double rose-shaped flowers, white with rich reddish orange center. Double flowering.

PALLIDAS (Butter and Eggs). Flowers very large and round; rich, light yellow with orange-gold center. Double flowering.

VAN SION. Yellow trumpet and petals; large flowers and strong erect stem. Double.

Mixed Daffodils. A grand mixture of all kinds, for naturalization in the woods.

*ERANTHIS hyemalis* (Winter Aconite). With slight winter protection Winter Aconite will pass through our winters. Flowers about the same time as the crocus.

EREMURUS Bungei. Golden yellow.

Elwesianus (Nobilis). Light pink; huge spikes.

Himalaicus. Snow-white; strong.

Himrob (Himalaicus Robustus). Sold under the name of Rob. Superbus.

Robustus. Clear rose.
EREMURUS—Continued.

Shelford. Brownish yellow.
Tubergeni. Different shades of yellow.
Warei. Dark yellow.
Seedlings. Extra strong.

*ERYTHRONIUM (Dog’s Tooth Violet) They are the early messengers of our moist woods. In April and May our woods are covered with these interesting bulbous plants. They are excellent for naturalizing in shady rock gardens.

americanum. Light yellow flowers.
californicum. Flowers white.
citrinum. Flowers creamy at the outside, citron center.
grandiflorum robustum. Bright yellow.
Hartwegi. Very lovely yellow.

*GALANTHUS (Snowdrops). Very fine for the shady rock garden or in woody places for naturalizing.
nivalis simplex. Old-fashioned variety.
nivalis flore pleno. Double.

IXIA Achievement (Corn Lilies). Pale yellow, passing into pink. Outside light purple, black eye.

Alliance. White, tipped violet.
Althea. White, purple eye.
Ambassador. Crimson, very fine.
Azurea. Blue, purple center.
Beauty of Norfolk. Pale yellow and magenta.
Bucephalus major. Bright red, large flower.
Christine. Light blue.
Conqueror. Yellow, shaded red.
Duchess of Edinburgh. White, striped lilac.
Emperor of China. Dark yellow and brown.
Englishtton. Violet-carmine.
Erasmus. Yellow with dark eye, outside streaked purple.
Hogarth. Creamy yellow, purple eye. Large.
Invincible (Monarch). Carmine-purple.
Marvelous. Yellow, violet eye.
Mozart. Golden yellow.
Rossini. Dark rose.
Viridiflora. Green with black eye.

Vulcan. Crimson, shaded orange.
Wonder (Rosea Plena). New double rose, extra.

*MUSCARI, Heavenly Blue—sky blue (Grape Hyacinth). The best variety for mass planting. Flower at the time Chionodoxa, Crocus and Snowdrop are going. Do very well in wild garden and also in the grass if it is not too rank. They are nice under trees and along the borders where they may be left undisturbed.

racemosum. Dark blue.

*SCILLA bifolia (Blue Bell). Ultramarine-blue.
campanulata Blue. Porcelain blue, candelabra-shaped bells, blooming with the May-flowering and Lily-flowering Tulips.
sibirica (Siberian Squill). Earliest to flower, connecting the flowering of the Crocuses with the Narcissi. Fine for naturalizing. Producing drooping, bell-like flowers on stems 3 to 4 inches high. Succeed well in rock garden. Color bright blue.
Dahlias
New and Rare Varieties

We have listed only Dahlias that we consider excellent cut flower varieties.

**COLONEL CHAS. A. LINDBERGH.** Hyb. Cac. A beautiful rose "du Barry" shade, overlaid and suffused with old ivory, shading off to pale gold at center. Reverse of petals light carmine-pink. An extremely free bloomer for a flower of its size. Stems are rigid and straight, dark green foliage and good habit of growth.

**JANE COWL.** Dec. The sensation of the 1928 New York Dahlia Show and again winning the highest prize this year. A large, finely colored flower—warm buff and old gold blending to bright salmon at the perfect center. A stem of unusual strength and length; foliage tough, bush of ideal growth.

**F. T. D.** Dec. A sport of Trentonian and an exact counterpart of the parent except in color, which is a rich Tyrian rose. This variety was named for the Florist's Telegraph Delivery. Flowers are held well above the foliage on rigid stems.

**NATHAN HALE.** Dec. A fit companion for Sagamore by the same originator. It is very similar to Sagamore in formation and general habit, but the color is a rich burnt orange.

### Standard Varieties

**ALEX WALDIE.** Dec. One of the most beautiful varieties. Flowers large, on good, long stems. Color a creamy ground, overlaid with a delicate salmon-pink.

**ALTAMONT.** Dec. Large, full flowers with long slightly curved petals which give the flower an artistic form. Plants grow tall; long, slender stems. Flowers are good keepers. Color, rose, deepening to American Beauty rose at center.

**CHAMPAGNE.** Dec. One of the largest Dahlias to date. A model for shape, habit of growth, freedom of flowering, and above all, its remarkable and distinct color, golden champagne with chamois shadings.

**CHAS. STRATTON.** Dec. A wonderful exhibition flower, having won many prizes in the East for its large size and artistic coloring, pale gold, shaded and tipped with old rose. A strong, healthy grower.

**COUNTESS OF LONSDALE.** Cac. Deep salmon-red. The cactus for the millions. Extra fine bloomer.

**EARL WILLIAMS.** Dec. Red and white variegated, the red predominating. It is of immense size. The petals twist and curl. The stems hold the flowers perfectly erect and out of the foliage.

**ELITE GLORY.** Dec. A distinctly different dahlia. Size is simply immense; large and thick. Even the plant is larger and sturdier than any other dahlia plant, although it is of only medium height. Foliage is extra heavy dark green and insect proof. Flower is a brilliant, rich red without shadings.

**ELIZA CLARKE BULL.** Dec. It is a pleasure to recommend this dahlia as every one who sees it growing wants it. It is the largest pure white decorative; comes on good long, strong stems, never burns in the hottest weather. Blooms freely and retains its perfect, beautiful formation the entire season.
DAHLIAS, STANDARD VARIETIES—Cont.

ETENDARD DE LYON. Hyb. Cac. Carmine-rose; curly wavy petals.

GLADYS BATES. Cac. Fine stems supporting good-sized flowers of a lovely shade of tan with a reverse of rose. A free bloomer. The petals are beautifully incurved, showing the rose reflex.

HIS MAJESTY. Hyb. Cac. Rich, brilliant red of good size and true hybrid cactus formation; nice stems and a medium size bush.

JEAN KERR. Show. The best white cut flower variety on the market. Creamy white. Good stems and it keeps well.

JERSEY’S BEAUTY. Dec. Pure pink decorative; the outer petals curling all the way back to the stem, giving it extra depth. Long, stiff stems hold the blooms perfectly erect. This is the dahlia of which so much has been written that it must be the best known dahlia of today.

JUDGE ALTON B. PARKER. Dec. Dark burnt orange and buff. Very large flowers on medium high bushes.

JUDGE MAREAN. Dec. A pleasing shade of cream, highly suffused with pink. We can highly recommend it for its good size, stem, early, free blooming and healthy growth.

LE TOREADOR. Dec. Stands at the head of the crimson class. A very free bloomer with long wiry stems and an excellent keeper.

MARGARET MASSON. Dec. This is a beautiful silvery rose-pink of great depth and size. Has won many prizes for the largest dahlia in the show. Its stem and keeping qualities make it an excellent exhibition variety.

MARGUERITE BOUCHON. Cac. A lovely brilliant rose-pink with a white center on fine wiry stems. Very good keeper.

MARIPOSA. Hyb. Cac. Flowers of a delightful shade of lavender-pink bloom on good stems, on a strong bush. Perfect form.

MAUDE ADAMS. Show. A pure, snowy white, very effectively overlaid clear, delicate pink. One of the finest show dahlias.

MEPHISTOPHELES. Dec. Huge scarlet blooms with some of the petals tipped yellow. A consistent prize winner.

MISS CALIFORNIA. Dec. A large, perfectly formed and very beautiful dahlia of the new shade known as Oriental fuchsia. Plant is tall, with stiff, strong stems of exceptional length, holding the flowers well above the foliage. An excellent keeper; it is very desirable for a cut flower as well as for exhibition.
DAHLIAS—Continued.

MORDELIA. Dec. One of the largest dahlias of today. It is held high above a rather tall plant on long, slim stems. A bright, glowing apricot buff color, infinitely more beautiful than can be described.

MRS. CARL SALBACH. Dec. This is an extra satisfactory dahlia to grow. Color is pleasing, solferino-pink. Stem is often 16 inches long without disbudding. Flower is of good substance and a wonderful keeper.

MRS. ELEANOR MARTIN. Dec. It is no exaggeration to describe this as a giant flower, the blooms averaging 10 inches across and carried on a canelike stem of good length. This attracted much attention in the garden both for its size and coloring, which is beautiful mulberry suffused with gold.

MRS. I. de VER WARNER. Dec. Large, perfect flowers of a deep mauve-pink on stout stems. An extra robust, healthy grower and free bloomer. One of the especially admired ones in our exhibits.

NERTHUS. Cac. The center of the flower is a rich, glowing, bronzy yellow, passing to a carmine-rose at the tip.

NICHIU. Hyb. Cac. Huge, fluffy, chrysanthemum-like flowers of clear lemon-yellow, borne on wiry stems of good length.

PANORAMA. Dec. A soft tan self-colored; on good stems.

Patrick O'Mara. Dec. The color is an unusually soft and pleasing shade of orange-buff slightly tinged Neyron rose. Good keeping qualities and good stems. An ideal florist's dahlia.

PURITY. Dec. Best pure white at its price. Large, fine flowers with artistically curled petals giving it a light fluffy appearance.

QUEEN OF THE GARDEN BEAUTIFUL. Dec. Huge, pale yellow flowers of an irregular, rather shaggy formation produced freely on a short compact bush. The long stems hold the flowers erect and well out of the plant, showing them to good advantage.

RED CROSS. Hyb. Cac. The flowers are produced freely on strong, wiry stems. The color is a combination of red and yellow with a suffusion difficult to describe. Very robust grower.

RHEINKOENIG. Cac. Pure, snow white flowers of splendid form, good size and great substance, lasting splendidly when cut.

ROMAN EAGLE. Dec. A flower that is typically an Autumn shade. Large exhibition decorative of a flaming, brilliant, burnished copper color. Flowers held well above the dark green foliage on stiff stems. Medium height plants, profuse bloomers.

SAGAMORE. Dec. Rich amber-gold exquisitely shaded toward the center and in the depths of the large, perfectly formed blooms with a warm salmon-rose or orange-buff. Strong, healthy growing habit.

SANHICAN GEM. Dec. One of the most admired in our gardens. Color is a delightfully shaded with amber. At maturity it is a clear old rose with a sheen which glistens in the sunlight. Petals are large and thickly placed, true staghorn type.

WODAN. Hyb. Cac. Bold, large, but not coarse flowers. Graceful arrangement of semi-curved petals of a pleasing delicate salmon-rose color, shading to old gold in the center.

W. W. RAWSON. Show. Pure white overlaid with amethyst-blue, which gives it the appearance of delicate lavender. Very large.

YELLOW COLOSSE. Dec. Large flowers of pure primrose yellow on good long strong stems.

POMPON DAHLIAS

CATHERINE. Clear, canary yellow.

HELEN COTTRELL. Mauve-pink with cleft tips.

ROSE GLOW. A glowing rose with the yellow ends of the petals just showing through.

SNOWBIRD. Pure white, compact form.

TOMMY KEITH. Cardinal-red, tipped white.

WINIFRED. White, tipped lavender. Very small on long, stiff stems.
A visitor from the East would be struck by the absence from Middle West gardens of practically all members of the heath family. To this family belong the most beautiful of all broad-leaf evergreens, the Rhododendrons and Azaleas.

The reason they are not here is that our soil is too good for them, as judged by ordinary agricultural standards. Our soils are rich in lime, and therefore neutral,—a condition that favors most cultivated plants. The heath family, however, does best in places where the soil is deficient in lime, and therefore mildly acid, or sour. The granitic areas of New England and the East generally are places where such plants as Rhododendrons are at home. Elsewhere, as for example in Michigan, with the exception of a few places, they demand special methods of culture.

The first essential for success is to dig out the soil as deep as the roots will go, and to replace it with top soil or leaf mold from the woods. This leaf mold will be deficient in lime, and will provide the right kind of a soil for members of the heath family. While the plants are becoming established they should be watered with rain water, and not with the limy hard water of our city water supplies. After the plants have become established they will need no water except what they get naturally.

It is best to plant where there is some protection from the wind. Along the north side of buildings or evergreen wind-breaks is the best place, because the exposure to sun in the winter time kills the leaves of the Rhododendrons.

In the fall a mulch of loose fallen leaves should be raked high around the bushes, and this mulch should not be removed in the spring time. If it is allowed to remain it will settle down and gradually decompose into more of the exact sort of soil that is most advantageous to the plants.

There have been methods suggested for making naturally neutral soils acid by treatment with acid phosphate, aluminum sulphate, alum, etc. The danger is that a beginner usually overdoes soil treatment and kills his plants outright.

No woodland development where rhododendrons are used extensively is complete without the introduction of the native Azalea. Azalea lutea (Flame Azalea) is especially recommended in that it is a free bloomer and produces a variety of color. These, if planted in locations where they receive the sun during part of the day, will produce far more bloom than when introduced in the woodland where the shade is quite dense.
Rhododendrons

There is a luxuriance about Rhododendrons that is very hard to describe, but which everyone feels and admires when they behold them. As foundation plantings about the home, they impart a feeling of warmth in winter and of coolness in summer.

R. catawbiense compacta. For positions exposed to sun and wind these dwarfed forms are superb. Small dark green foliage. In June every branch is graced with a cluster of broad rosy purple blooms.

R. carolinianum. Most beautiful of native Rhododendrons, growing 6 to 8 feet high. Plants are well clothed with dark green leaves. Unusually large, pale, rose-pink flowers are borne in early May. Thrives in full sun or partial shade.

R. carolinianum album (White Carolina Rhododendron). Blooms just before the pink variety. Plant is covered with glistening white flowers. Very handsome.

R. maximum. A very hardy variety. Magnificent in size. Widely used for mass effect. Produces a luxuriant growth of dark green, narrow leaves, 6 to 12 inches in length, giving it a most delightful atmosphere. Flowers are light pink or white, two inches across, and are borne in large clusters. Blooms in early June.

Azaleas

AZALEA arborescens (Sweet Azalea). Flowers are white, sometimes faintly tinted with rose. The beauty of the fragrant blooms are enhanced by the long, bright red filaments of the stamens. The flowers are borne after the foliage appears. In sheltered plantings it often reaches 15 to 18 feet in height. Magnificent.

A. calendulacea (Flame Azalea). Even more gorgeous than the Ghent Azaleas both in foliage and flower. From early May well into June the plants are covered with orange-yellow or flame-red blooms, often two inches across.

A. canescens (Piedmont Azalea). Rosy pink or whitish trumpet-shaped flowers during May just before or with the unfolding leaves. Heavily laden with fragrance. Should be planted in masses against a dark background to show the flowers to best advantage.

A. nudiflora (Pinkster Bloom). Rosy pink or white blossoms of strong sweet fragrance; flowers in great profusion at about the same time as A. canescens. Fall foliage assumes attractive shades of orange and bronze. Fine for dry open places. Height two to six feet.
Climbing Plants and Vines

AMPELOPSIS Veitchi (Boston Ivy). Popular climbing plant with small shining leaves. Foliage has nice autumn coloring.

Lowi. Will cling to the smoothest surface without support. Nice coloring in the fall.

quinquefolia. Very rapid grower. Excellent for covering trees, verandas; leaves change into lovely crimson in fall.

ARISTOLOCHIA sipho (Dutchman’s Pipe). Vigorous growing climber. Brownish colored flowers resembling a pipe in shape. Foliage large.

CELASTRUS scandens (Bittersweet). Rapid grower. Grows in any situation, sun or shade. Bright orange fruit in autumn which remains on plant all winter.

CLEMATIS (Virgin’s Bower). The clematis belong to our most beautiful climbing plants and are of easy culture. Prefer a sandy loam.

Henryi. Large creamy white flowers.
Jackmani. Large violet-purple blossoms.
montana perfecta. Anemone clematis with large white flowers.

paniculata. Flowers pure white and very fragrant.

virginiana. Native border thickets. White flowers in August and September.

LYCIUM chinensis (Matrimony Vine). A shrubby climber with purple flowers followed by orange-red berries.

EUONYMUS radicans. An evergreen vine that is useful for covering low walls.

vegetus. A more rapid growing variety with larger leaves. Bright orange-red berries in the fall.

POLYGONUM Auberti (Silver Lace Vine). A rapid growing climber with beautiful white flowers.

PUERARIA Thunbergiana (Kudzu Vine). If you desire immediate effect here is a rapid growing vine, 25 to 30 feet in one season.

WISTERIA sinensis. Shrubby vine with beautiful sweet-scented pale blue flowers.

### Plants for the Hardy Border

We make a specialty in collecting miscellaneous native trees, shrubs, and plants, useful for landscape planting that we sell in carload consignments only. We are in a position to quote prices on the following plant materials of this character to those interested:

#### Evergreens

- **Thuya occidentalis** (American Arbor-Vitae). 5 ft. to 15 ft.
- **Tsuga canadensis** (Hemlock). 5 ft. to 20 ft.

#### Deciduous Trees

- **Alnus glutinosa** (Black Alder). 6 ft. to 8 ft.
- **Betula nigra** (Red or River Birch). 6 ft. to 8 ft.
- **Cercis canadensis** (Redbud). 4 ft. to 10 ft.
- **Cornus florida** (Flowering Dogwood). 5 ft. to 15 ft.
- **Crataegus** (Hawthorn). In variety. 4 ft. to 10 ft.
- **Fraxinus americana** (White Ash). 5 ft. to 8 ft.
- **Prunus americana** (Common Wild Plum). 4 ft. to 6 ft.
- **Prunus Munsoniana** (Wild Goose Plum). 4 ft. to 10 ft.
- **Prunus pumila** (Sand Cherry). 4 ft. to 6 ft.
- **Prunus virginiana** (Choke Cherry). 6 ft. to 8 ft.

#### Deciduous Shrubs

- **Amelanchier canadensis** (Serviceberry). 5 ft. to 10 ft.
- **Cornus paniculata** (Gray Dogwood). 4 ft. to 6 ft.
- **Cornus stolonifera** (Red Osier Dogwood). 4 ft. to 6 ft.
- **Dirca palustris** (Leatherwood, Moosewood). 4 ft. to 6 ft.
- **Hamamelis virginiana** (Witch-hazel). 5 ft. to 15 ft.
- **Nemopanthus canadensis** (Michigan Holly).
- **Ilex verticillata** (Black Alder, Winterberry). 5 ft. to 10 ft.
- **Vaccinium corymbosum** (High-Bush Blueberry). 4 ft. to 6 ft.
- **Vaccinium pennsylvanicum** (Low Blueberry). 6 in. to 1 ft.
- **Viburnum lentago** (Sheepberry, Nannyberry). 6 ft. to 10 ft.
Business Terms

Responsibility. We supply the best stock carefully packed and shipped but we give no warranty, expressed or implied, or guarantee other than that our stock is sent out in first-class condition. In case of justifiable charges, no complaint will be honored that is not made within six (6) days after stock is received and inspected. We will not be responsible for refunds on stock once accepted or for an amount greater than the original price of the stock ordered.

Shipping and Delivery. We make shipment to all points at purchaser’s risk. We take every precaution to supply first-class stock properly packed and shipped but we do not guarantee safe delivery. Our responsibility ceases when we have made delivery to the station or dock of the transportation company or upon the grounds of the purchaser in case of our own deliveries.

Location. Gunther Gardens are located within convenient access to fast and efficient transportation facilities, seven (7) miles from Ann Arbor and forty (40) miles from Detroit. We invite those interested to visit our gardens and nurseries at any time.

Orders. All orders are promptly acknowledged, packed and sent out. We advise second selections in case first choice is not available; however, we take every precaution to supply our customers with exactly the variety and quantity ordered at all times.

Terms. Cash or satisfactory references must either accompany order or be sent us before we can fill and send out orders. Open account may be arranged.

Important. We ask that our customers advise us when ordering stock if shipment is to be made by Express, Parcel Post or other means of transportation. Prices for nursery stock are based upon cost f. o. b. Ann Arbor. Due to expense of handling, we cannot accept orders amounting to less than $1.00.

Parcel Post Instructions. On all orders for herbaceous plants sent by Parcel Post, add to the value of the order the additional per cent of the order computed as follows:

Five per cent additional to the following states: Indiana, Illinois, Michigan, Ohio and Wisconsin.

Ten per cent additional to the following states: Iowa, Minnesota, Missouri, Kentucky, Pennsylvania and West Virginia.

Fifteen per cent additional to the following states: Alabama, Arkansas, Delaware, Georgia, Kansas, Louisiana, Maine, Maryland, Mississippi, New Hampshire, New Jersey, New York, North Carolina, North Dakota, Oklahoma, South Carolina, Tennessee, Vermont, Virginia.

Twenty per cent additional to the following states: Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Texas, Utah, Washington, Wyoming.

Express orders are forwarded charges collect. Shipping notice is mailed the same day the order is shipped.

Payments. All orders should be accompanied by payment to cover all charges unless an account is held with us by the purchaser. Remittance should be made by personal check or postal money order. Personal check or cash should accompany all orders made in person at our gardens or nurseries. In case of open accounts with us, payment is due within thirty days after date of order.
Landscape Department

We have a competent staff of workers who can cope with your garden problems. We are in a position to design and execute gardens suitable to any type of property.

Our landscape department is also interested in co-operating with those who do most of their own gardening, but find themselves in difficulty regarding particular points of design or planting. It will pay you to have a consultation with Mr. Gunther about your contemplated garden and landscape work.

We are available for lectures before garden clubs and other organizations interested in the discussion of the various phases of garden and landscape work.
